The present application describes organic compounds that are
useful for the treatment, prevention and/or amelioration of
diseases particularly bacterial infections.

AMINOTHIAZOLES AND THEIR USES

BACKGROUND

[0001] Since the discovery of penicillin, pharmaceutical companies have produced a number of antibacterial agents to combat a wide variety of bacterial infections. In the past several years, there has been rapid emergence of bacterial resistance to several of these antibiotics. The multidrug resistance among these bacterial pathogens may also be due to mutation leading to more virulent clinical isolation. Perhaps the most disturbing occurrence has been the acquisition of resistance to vancomycin, an antibiotic generally regarded as the agent of last resort for serious Gram-positive infections.

[0002] This is true especially of some Gram-positive pathogen groups, such as *staphylococci*, *pneumococci* and *enterococci* (S. Ewig et al.; Antibiotika-Resistenz bei Erregern ambulant erworbener Atemwegsinfektionen (Antibiotic resistance in pathogens of outpatient-acquired respiratory tract infections); Chemother. J. 2002, 11, 12-26; F. Tenover; Development and spread of bacterial resistance to antimicrobial agents: an overview; Clin. Infect. Dis. 2001 Sep. 15, 33 Suppl. 3, 108-115) as well as *Staphylococcus*, *Streptococcus*, *Mycobacterium*, *Enterococcus*, *Corynebacterium*, *Borrelia*, *Bacillus*, *Chlamydia*, *Mycoplasma*, and the like.

[0003] A problem of equally large dimension is the increasing incidence of the more virulent, methicillin-resistant *Staphylococcus aureus* (MRSA) among clinical isolates found worldwide. As with vancomycin resistant organisms, many MRSA strains are resistant to most of the known antibiotics, but MRSA strains have remained sensitive to vancomycin. However, in view of the increasing reports of vancomycin resistant clinical isolates and growing problem of bacterial resistance, there is an urgent need for new molecular entities effective against the emerging and currently problematic Gram-positive organisms.

[0004] This growing multidrug resistance has recently rekindled interest in the search for new structural classes of antibiotics that inhibit or kill these bacteria.

SUMMARY OF THE INVENTION

[0005] There remains a need for new treatments and therapies for bacterial infections. There is also a need for compounds useful in the treatment or prevention or amelioration of one or more symptoms of bacterial infections. Furthermore, there is a need for methods for modulating the activity of the elongation factor EF-Tu, using the compounds provided herein.

[0006] In one aspect, the invention provides a compound of formula I:

[0007] In another aspect, the invention provides a method of treating a bacterial infection wherein the treatment includes administering to a subject in need thereof a pharmaceutically acceptable amount of a compound of formula I, II, III, IV, V, or VI, such that the bacterial infection is treated.

[0008] In another aspect, the invention provides a method of treating an EF-Tu associated-state wherein the treatment includes administering to a subject in need thereof a pharmaceutically acceptable amount of a compound of formula I, II, III, IV, V, or VI, such that the EF-Tu associated state is treated.

[0009] In still another aspect, the invention provides a method of treating, inhibiting or preventing the activity of EF-Tu in a subject in need thereof, which includes administering to the subject a pharmaceutically acceptable amount of a compound of formula I, II, III, IV, V, or VI. In one embodiment, a bacterial infection is treated in a subject in need thereof.

[0010] In another aspect, the invention provides a method of treating, inhibiting or preventing the activity of bacteria in a subject in need thereof, which includes administering to the subject a pharmaceutically acceptable amount of a compound of formula I, II, III, IV, V, or VI, wherein the compound interacts with any target in the life cycle of the bacteria. In one embodiment, the target is EF-Tu.

[0011] In another aspect, the invention provides a method of treating a bacterial infection in a subject, wherein the treatment includes administering to a subject in need thereof a pharmaceutically acceptable amount of a compound of the formula I, II, III, IV, V, or VI, and a pharmaceutically acceptable carrier, such that the bacterial infection is treated.

[0012] In still another aspect, the invention provides a method of treating a bacterial infection wherein the treatment includes administering to a subject in need thereof a pharmaceutically effective amount of a compound of the formula I, II, III, IV, V, or VI, in combination with a pharmaceutically effective amount of an additional therapeutic agent, such that the bacterial infection is treated. In one embodiment, the compound of the formula I, II, III, IV, V, or VI and the other pharmaceutical agent are administered as part of the same

pharmaceutical composition. In another embodiment, the compound of the formula I, II, III, IV, V, or VI and the other therapeutic agent are administered as separate pharmaceutical compositions, and the compound is administered prior to, at the same time as, or following administration of the other agent.

[0013] In another aspect, the invention provides a packaged bacterial infection treatment, comprised of formula I, II, III, IV, V, or VI, packaged with instructions for using an effective amount of the compound to treat a bacterial infection.

[0014] In another aspect, the invention provides a method of treating acne in subject in need thereof, wherein the treatment includes administering to the subject a pharmaceutically acceptable amount of a compound of formula I, II, III, IV, V, or VI.

[0015] In yet another aspect, the invention provides a pharmaceutical composition which includes a compound of formula I, II, III, IV, V, or VI, and at least one pharmaceutically acceptable carrier or diluent.

DETAILED DESCRIPTION OF THE INVENTION

[0016] This invention is directed to compounds, e.g., thiopetide compounds, and intermediates thereto, as well as pharmaceutical compositions containing the compounds for use in treatment of bacterial infection. This invention is also directed to the compounds of the invention or compositions thereof as modulators of the elongation factor EF-Tu. The compounds are particularly useful in interfering with the life cycle of bacteria and in treating or preventing a bacterial infection or physiological conditions associated therewith. The present invention is also directed to methods of combination therapy for inhibiting EF-Tu activity in cells, or for treating or preventing a bacterial infection in patients using the compounds of the invention or pharmaceutical compositions, or kits thereof.

[0017] In one aspect, the invention provides compounds of the formula I:

[0018] and pharmaceutically acceptable salts, enantiomers, stereoisomers, rotamers, tautomers, diastereomers, atropisomers or racemates thereof, including the pyridine N-oxide thereof,

[0019] wherein

[0020] R¹ is -Z-CO₂H and -A-Z-CO₂H;

[0021] R^{1a} is hydrogen, -Z-CO₂H, and -A-Z-CO₂H, wherein if R^{1a} is hydrogen, then the Z residue of R¹ is substituted by at least two CO₂H groups; or

[0022] R¹ and R^{1a}, taken in combination, form a saturated, partially unsaturated or aromatic heterocycle having 4 to 7 ring atoms and having 0-3 additional ring heteroatoms selected from N, O and S, wherein the heterocycle is substituted by at least two residues independently selected from CO₂H, -Z-CO₂H, and -A-Z-CO₂H;

[0023] A is independently selected at each occurrence from the group consisting of a -C(O)-, -C(O)O-, -C(O)N(R^{8a})-, -S(O)₂-, -S(O)-, -C(H)=N-, -S(O)₂N(R⁸)-, and -S(O)N(R^{8a})-;

[0024] Z is C₁-C₁₀alkylene, C₃-C₈cycloalkylene, C₃-C₈heterocycloalkylene, phenylene, or 5-6 membered heteroarylene, each of which is optionally substituted with one or more groups independently selected from C₁-C₄alkyl, C₁-C₄alkoxy, hydroxy, amino, mono- and di-C₁-C₆alkylamino, C(O)OH, or halogen;

[0025] R^{2a} is selected from the group consisting of H, substituted or unsubstituted alkyl, OH, OR^{4a}, OC(O)R^{4a}, OC(O)N(R^{8a})₂ and N(R^{8a})₂;

[0026] R^{2b} is selected from the group consisting of absent, H and alkyl, or R^{2a} and R^{2b} may together form =O or =NH;

[0027] R³ and R¹² are each, independently, selected from the group consisting of H, halogen, OR^{4b}, -A-J, and N(R^{8a})₂;

[0028] R^{4a} is selected from the group consisting of H, and alkyl;

[0029] R^{4b} is selected from the group consisting of alkyl and -(CH₂-CH₂-O)_n-R⁹, wherein n is an integer of 1-500, 1,000, 2,000, 3,000, 4,000, 5,000, 10,000, 20,000, 30,000, 40,000, 50,000, or 60,000 or is a mean of a plurality of integers having a value of 1-500, 1,000, 2,000, 3,000, 4,000, 5,000, 10,000, 20,000, 30,000, 40,000, 50,000, or 60,000;

[0030] R⁵ is selected from the group consisting of H, alkyl, and R^{4b};

[0031] J is selected from the group consisting of H, F, O-alkyl, N(R^{8a})₂, N⁺(R^{8a})₃, N(R^{8a})C(O)alkyl, CO₂H, C(=O)N(R^{8a})₂, CO₂-alkyl, P(O)(OH)₂, P(O)(O-alkyl)₂, and a substituted nitrogen-containing heterocycle;

[0032] R^{8a} is absent, or selected from the group consisting of H, -(alkyl)-, -(cycloalkyl)-, C(alkyl)₂-J, -R^{4b}, wherein R^{8a} can also cyclize with the atom to which R^{8a} is bonded to form a 3, 4, 5, 6 or 7-membered ring that is aromatic or non-aromatic and may contain one or more heteroatoms, wherein the ring may be further substituted one or more times with substituents that are the same or different; and

[0033] R⁹ is selected from the group consisting of H, alkyl and CH₂CO₂H.

[0034] Certain compounds of formula I provided herein include compounds of formula II:

[0038] Certain compounds of formula III include those compounds represented by formula IV:

[0035] and pharmaceutically acceptable salts thereof.

[0036] Certain other compounds of formula I provided herein include compounds of formula III:

[0037] and pharmaceutically acceptable salts, enantiomers, stereoisomers, rotamers, tautomers, diastereomers, atropisomers or racemates thereof, including the pyridine N-oxide thereof.

[0039] Certain compounds of formula I include those compounds represented by formula V:

[0040] and pharmaceutically acceptable salts, enantiomers, stereoisomers, rotamers, tautomers, diastereomers, atropisomers or racemates thereof, including the pyridine N-oxide thereof, wherein

[0041] D represents a five or six membered heterocyclic ring which is saturated or aromatic, which ring comprises 0-2 additional ring heteroatoms selected from N, O or S.

[0042] Certain compounds of formula IV include those compounds represented by formula V-a:

[0043] and pharmaceutically acceptable salts, enantiomers, stereoisomers, rotamers, tautomers, diastereomers, atropisomers or racemates thereof, including the pyridine N-oxide thereof, wherein

[0044] D represents a five or six membered heterocyclic ring which is saturated or aromatic, which ring comprises 0-2 additional ring heteroatoms selected from N, O or S.

[0045] Certain preferred compounds of Formula I, III, or V include those compounds in which R^{2b} , R^{4b} and R^5 are H, and R^{4a} is CH₃. Other preferred compounds of Formula I include those compounds in which R^{2b} , R^{4b} and R^5 are H, R^{4a} is CH₃, and R^{12} is CH₂-O-CH₃.

[0046] Certain compounds of formula V include those compounds represented by formula VI:

[0047] Certain compounds of formula I include those compounds represented by formula VI-a:

[0048] and pharmaceutically acceptable salts, enantiomers, stereoisomers, rotamers, tautomers, diastereomers, atropisomers or racemates thereof, including the pyridine N-oxide thereof, wherein

[0049] D represents a five or six membered heterocyclic ring which is saturated or aromatic, which ring comprises 0-2 additional ring heteroatoms selected from N, O or S.

[0050] Certain preferred compounds of Formula III, IV, V, V-a, VI, VI-a include those compounds in which

[0051] A is selected from the group consisting of $-\text{C}(\text{O})\text{O}-$, $\text{C}(\text{O})-\text{NH}-$, $-\text{C}(\text{O})-$, $-\text{S}(\text{O})_2-$, and $-\text{S}(\text{O})_2\text{NH}-$; and

[0052] Z is independently selected at each occurrence from the group consisting of $\text{C}_1\text{-C}_{10}$ alkylene,

[0053] Still other compounds of formula I provided herein include those compounds in which R^{2a} is OH or OAc.

[0054] Yet other compounds of formula I provided herein include those compounds in which the core pyridine functionality is of the following N-oxide formula:

[0055] In yet another aspect, the invention provides compounds of the formula VII:

VII

[0056] and pharmaceutically acceptable salts, enantiomers, stereoisomers, rotamers, tautomers, diastereomers, atropisomers or racemates thereof, including the pyridine N-oxide thereof,

[0057] wherein

[0058] R^1 is $-\text{Z}-\text{CO}_2\text{H}$ and $-\text{A}-\text{Z}-\text{CO}_2\text{H}$;

[0059] R^{1a} is hydrogen, $-\text{Z}-\text{CO}_2\text{H}$, and $-\text{A}-\text{Z}-\text{CO}_2\text{H}$, wherein if R^{1a} is hydrogen, then the Z residue of R^1 is substituted by at least two CO_2H groups; or

[0060] R^1 and R^{1a} , taken in combination, form a saturated, partially unsaturated or aromatic heterocycle having 4 to 7 ring atoms and having 0-3 additional ring heteroatoms selected from N, O and S, wherein the heterocycle is substituted by at least two residues independently selected from CO_2H , $-\text{Z}-\text{CO}_2\text{H}$, and $-\text{A}-\text{Z}-\text{CO}_2\text{H}$;

[0061] A is independently selected at each occurrence from the group consisting of a $-\text{C}(\text{O})-$, $-\text{C}(\text{O})\text{O}-$, $-\text{C}(\text{O})\text{N}(\text{R}^{8a})-$, $-\text{S}(\text{O})_2-$, $-\text{S}(\text{O})-$, $-\text{C}(\text{H})=\text{N}-$, $-\text{S}(\text{O})_2\text{N}(\text{R}^{8a})-$, and $-\text{S}(\text{O})\text{N}(\text{R}^{8a})-$;

[0062] Z is C₁-C₁₀alkylene, C₃-C₈cycloalkylene, C₃-C₈heterocycloalkylene, phenylene, or 5-6 membered heteroarylene, each of which is optionally substituted with one or more groups independently selected from C₁-C₄alkyl, C₁-C₄alkoxy, hydroxy, amino, mono- and di-C₁-C₆alkylamino, C(O)OH, or halogen;

[0063] R² is hydrogen, C₁₋₆alkyl, hydroxyC₁₋₆alkyl, C₁₋₆alkoxyC₀₋₆alkyl, C₃₋₇cycloalkylC₀₋₄alkyl, arylC₀₋₄alkyl, or a residue of the formula:

[0064] R^{2a} is selected from the group consisting of H, substituted or unsubstituted alkyl, OH, OR^{4a}, OC(O)R^{4a}, OC(O)N(R^{8a})₂ and N(R^{8a})₂;

[0065] R^{2b} is selected from the group consisting of absent, H and alkyl, or R^{2a} and R^{2b} may together form =O or =NH;

[0066] R³ and R¹² are each, independently, selected from the group consisting of H, halogen, OR^{4b}, -A-J, and N(R^{8a})₂;

[0067] R^{4a} is selected from the group consisting of H, and alkyl;

[0068] R^{4b} is selected from the group consisting of alkyl and -(CH₂-CH₂-O)_n-R⁹, wherein n is an integer of 1-500, 1,000, 2,000, 3,000, 4,000, 5,000, 10,000, 20,000, 30,000, 40,000, 50,000, or 60,000 or is a mean of a plurality of integers having a value of 1-500, 1,000, 2,000, 3,000, 4,000, 5,000, 10,000, 20,000, 30,000, 40,000, 50,000, or 60,000;

[0069] R⁵ is selected from the group consisting of H, alkyl, and R^{4b};

[0070] J is selected from the group consisting of H, F, O-alkyl, N(R^{8a})₂, N⁺(R^{8a})₃, N(R^{8a})C(O)alkyl, CO₂H, C(=O)N(R^{8a})₂, CO₂-alkyl, P(O)(OH)₂, P(O)(O-alkyl)₂, and a substituted nitrogen-containing heterocycle;

[0071] R^{8a} is absent, or selected from the group consisting of H, -(alkyl)-, -(cycloalkyl)-, C(alkyl)₂-J, -R^{4b}, wherein R^{8a} can also cyclize with the atom to which R^{8a} is bonded to form a 3, 4, 5, 6 or 7-membered ring that is aromatic or non-aromatic and may contain one or more heteroatoms, wherein the ring may be further substituted one or more times with substituents that are the same or different; and

[0072] R⁹ is selected from the group consisting of H, alkyl and CH₂CO₂H.

[0073] Preferred embodiments of the compounds of the invention (including pharmaceutically acceptable salts thereof, as well as enantiomers, stereoisomers, rotamers, tautomers, diastereomers, or racemates thereof) are shown below in Table A and Table B, and are also considered to be "compounds of the invention."

Chemical structure 39 is a complex molecule featuring a central pyridine ring. The pyridine ring is substituted with a thiazole ring at the 2-position, a thiazole-thiazole chain at the 3-position, and a thiazole-thiazole chain with a hydroxyl group at the 4-position. The thiazole-thiazole chain at the 3-position is further substituted with a cyclohexane ring bearing a carboxylic acid group. The thiazole-thiazole chain with a hydroxyl group is also substituted with a thiazole ring. The molecule contains multiple chiral centers, indicated by dashed and wedged bonds.

[0074] In certain embodiments, the compound of the present invention is further characterized as a modulator of EF-Tu, including a prokaryotic EF-Tu, and especially including a bacterial EF-Tu. In a preferred embodiment, the compound of the invention is an EF-Tu inhibitor.

[0075] As used herein, the term “bacterial infection(s)” includes, but is not limited to, bacterial infections that occur in mammals, fish and birds as well as disorders related to bacterial infections that may be treated or prevented by administering antibiotics such as the compounds of the present invention. In addition to treating infections caused by multi-drug resistant strains of *Staphylococcus aureus*, *Streptococcus pneumoniae*, *Mycobacterium tuberculosis* and *Enterococci*, the compounds of the present invention are useful in treating infections caused by other bacteria including, but not limited to, *Clostridium difficile*, *Propionibacterium acnes*, *Bacteroides fragilis*, *Neisseria gonorrhoeae*, *Branhamella catarrhalis*, *Haemophilus influenzae*, *E. coli*, *Pseudomonas aeruginosa*, *Proteus vulgaris*, *Klebsiella pneumoniae*, and *Chlamydia trachomatis*.

[0076] Such bacterial infections and disorders related to such infections include, but are not limited to, the following: acne, rosacea, skin infection, pneumonia, otitis media, sinusitis, bronchitis, tonsillitis, and mastoiditis related to infection by *Streptococcus pneumoniae*, *Haemophilus influenzae*, *Moraxella catarrhalis*, *Staphylococcus aureus*, *Peptostreptococcus* spp. or *Pseudomonas* spp.; pharyngitis, rheumatic fever, and glomerulonephritis related to infection by *Streptococcus pyogenes*, Groups C and G streptococci, *Clostridium*

diphtheriae, or *Actinobacillus haemolyticum*; respiratory tract infections related to infection by *Mycoplasma pneumoniae*, *Legionella pneumophila*, *Streptococcus pneumoniae*, *Haemophilus influenzae*, or *Chlamydia pneumoniae*; uncomplicated skin and soft tissue infections, abscesses and osteomyelitis, and puerperal fever related to infection by *Staphylococcus aureus*, coagulase-positive *staphylococci* (i.e., *S. epidermidis*, *S. hemolyticus*, etc.), *S. pyogenes*, *S. agalactiae*, *Streptococcal* groups C-F (minute-colony *streptococci*), viridans *streptococci*, *Corynebacterium* spp., *Clostridium* spp., or *Bartonella henselae*; uncomplicated acute urinary tract infections related to infection by *S. saprophyticus* or *Enterococcus* spp.; urethritis and cervicitis; sexually transmitted diseases related to infection by *Chlamydia trachomatis*, *Haemophilus ducreyi*, *Treponema pallidum*, *Ureaplasma urealyticum*, or *Nisseria gonorrhoeae*; toxin diseases related to infection by *S. aureus* (food poisoning and Toxic shock syndrome), or Groups A, S. and C *streptococci*; ulcers related to infection by *Helicobacter pylori*; systemic febrile syndromes related to infection by *Borrelia recurrentis*; Lyme disease related to infection by *Borrelia burgdorferi*; conjunctivitis, keratitis, and dacryocystitis related to infection by *C. trachomatis*, *N. gonorrhoeae*, *S. aureus*, *S. pneumoniae*, *S. pyogenes*, *H. influenzae*, or *Listeria* spp.; disseminated *Mycobacterium avium* complex (MAC) disease related to infection by *Mycobacterium avium*, or *Mycobacterium intracellulare*; gastroenteritis related to infection by *Campylobacter jejuni*; intestinal protozoa related to infection by *Cryptosporidium* spp., odontogenic infection related to infection by viridans *streptococci*; persistent cough related to infection by *Bordetella pertussis*; gas gangrene related to infection by *Clostridium perfringens* or *Bacteroides* spp.; Skin infection by *S. aureus*, *Propionibacterium acne*; atherosclerosis related to infection by *Helicobacter pylori* or *Chlamydia pneumoniae*; or the like.

[0077] Further bacterial infections and disorders related to such infections that may be treated or prevented in animals include, but are not limited to, the following: bovine respiratory disease related to infection by *P. haemolytica*, *P. multocida*, *Mycoplasma bovis*, or *Bordetella* spp.; cow enteric disease related to infection by *E. coli* or protozoa (i.e., coccidia, cryptosporidia, etc.), dairy cow mastitis related to infection by *S. aureus*, *S. uberis*, *S. agalactiae*, *S. dysgalactiae*, *Klebsiella* spp., *Corynebacterium*, or *Enterococcus* spp.; swine respiratory disease related to infection by *A. pleuropneumoniae*, *P. multocida*, or *Mycoplasma* spp.; swine enteric disease related to infection by *E. coli*, *Lawsonia intracellularis*, *Salmonella* spp., or *Serpulina hyodysenteriae*; cow footrot related to infection by *Fusobacterium* spp.; cow metritis related to infection by *E. coli*; cow hairy warts related to infection by *Fusobacterium necrophorum* or *Bacteroides nodosus*; cow pink-eye related to infection by *Moraxella bovis*, cow premature abortion related to infection by protozoa (i.e., neosporium); urinary tract infection in dogs and cats related to infection by *E. coli*; skin and soft tissue infections in dogs and cats related to infection by *S. epidermidis*, *S. intermedius*, coagulase neg. *Staphylococcus* or *P. multocida*; dental or mouth infections in dogs and goats related to infection by *Alcaligenes* spp., *Bacteroides* spp., *Clostridium* spp., *Enterobacter* spp., *Eubacterium* spp., *Peptostreptococcus* spp., *Porphiromonas* spp., *Campylobacter* spp., *Actinomyces* spp., *Erysipelothrix* spp., *Rhodococcus* spp., *Trypanosoma* spp., *Plasmodium* spp., *Babesia* spp., *Toxoplasma* spp., *Pneumocystis* spp., *Leishmania* spp., *Trichomonas* spp. or

Prevotella spp. Other bacterial infections and disorders related to such infections that may be treated or prevented in accord with the method of the present invention are referred to in J. P. Sanford et al., "The Sanford Guide To Antimicrobial Therapy," 26th Edition, (Antimicrobial Therapy, Inc., 1996).

[0078] Further bacterial infections and disorders related to such infections that may be treated or prevented in animals include, but are not limited to, central nervous system infections, external ear infections, infections of the middle ear, such as acute otitis media, infections of the cranial sinuses, eye infections, infections of the oral cavity, such as infections of the teeth, gums and mucosa, upper respiratory tract infections, lower respiratory tract infections, genitourinary infections, gastrointestinal infections, gynecological infections, septicemia, bone and joint infections, skin and skin structure infections, bacterial endocarditis, burns, antibacterial prophylaxis of surgery, antibacterial prophylaxis in immunosuppressed patients, such as patients receiving cancer chemotherapy, or organ transplant patients and chronic diseases caused by infectious organisms, e.g., arteriosclerosis.

[0079] Bacterial protein synthesis requires EF-Tu chaperone proteins. EF-Tu is one of the most abundant proteins in bacteria, as well as one of the most highly conserved, and in a number of species the gene is duplicated with identical function. When bound to GTP, EF-Tu can form a complex with most aminoacylated tRNAs, loading the tRNA onto the ribosome. In one embodiment, the bacterial infection is associated with the activity of EF-Tu. Without being bound by theory, it is believed that the disruption of EF-Tu protein activity by the compounds of the invention will interfere with protein synthesis and thus bacterial function and/or proliferation. Because EF-Tu is highly conserved across Gram-positive and Gram-negative bacteria, the compounds of the present invention are useful for treating infections of both classes of bacteria.

[0080] As used herein, the term "EF-Tu-associated state" or "EF-Tu-associated disorder" include disorders and states (e.g., a disease state) that are associated with the activity of EF-Tu. A non-limiting example of an EF-Tu associated disorder is a bacterial infection in a subject.

[0081] The present invention includes treatment of bacterial infections, as well as EF-Tu-associated disorders, as described above, but the invention is not intended to be limited to the manner by which the compound performs its intended function of treatment of a disease. The present invention includes treatment of diseases described herein in any manner that allows treatment to occur, e.g., bacterial infection.

[0082] In certain embodiments, the invention provides a pharmaceutical composition of any of the compounds of the present invention. In a related embodiment, the invention provides a pharmaceutical composition of any of the compounds of the present invention and a pharmaceutically acceptable carrier or excipient of any of these compounds. In certain embodiments, the invention includes the compounds as novel chemical entities.

[0083] In one embodiment, the invention includes a packaged bacterial infection treatment. The packaged treatment includes a compound of the invention packaged with instructions for using an effective amount of the compound of the invention for an intended use.

[0084] The compounds of the present invention are suitable as active agents in pharmaceutical compositions that are efficacious particularly for treating bacterial infections. The

pharmaceutical composition in various embodiments has a pharmaceutically effective amount of the present active agent along with other pharmaceutically acceptable excipients, carriers, fillers, diluents and the like. The phrase, "pharmaceutically effective amount" as used herein indicates an amount necessary to administer to a host, or to a cell, issue, or organ of a host, to achieve a therapeutic result, especially an anti-bacterial infection effect, e.g., inhibition of proliferation of a bacterium, or of any other bacterial infection.

[0085] In other embodiments, the present invention provides a method for inhibiting the activity of an EF-Tu protein. The method includes contacting a cell with any of the compounds of the present invention. In a related embodiment, the method further provides that the compound is present in an amount effective to selectively inhibit the activity of an EF-Tu protein.

[0086] In other embodiments, the present invention provides a use of any of the compounds of the invention for manufacture of a medicament to treat a bacterial infection in a subject.

[0087] In other embodiments, the invention provides a method of manufacture of a medicament, including formulating any of the compounds of the present invention for treatment of a subject.

Definitions

[0088] The term "treat," "treated," "treating" or "treatment" includes the diminishment or alleviation of at least one symptom associated or caused by the state, disorder or disease being treated. In certain embodiments, the treatment comprises the induction of a bacterial infection, followed by the activation of the compound of the invention, which would in turn diminish or alleviate at least one symptom associated or caused by the bacterial infection being treated. For example, treatment can be diminishment of one or several symptoms of a disorder or complete eradication of a disorder.

[0089] The term "subject" is intended to include organisms, e.g., prokaryotes and eukaryotes, which are capable of suffering from or afflicted with a bacterial infection. Examples of subjects include mammals, e.g., humans, dogs, cows, horses, pigs, sheep, goats, cats, mice, rabbits, rats, and transgenic non-human animals. In certain embodiments, the subject is a human, e.g., a human suffering from, at risk of suffering from, or potentially capable of suffering from a bacterial infection, and for diseases or conditions described herein. In another embodiment, the subject is a cell.

[0090] The language "EF-Tu-modulating compound," "modulator of EF-Tu" or "EF-Tu inhibitor" refers to compounds that modulate, e.g., inhibit, or otherwise alter, the activity of EF-Tu. Examples of EF-Tu-modulating compounds include compounds of formula I, II, III, IV and V, as well as Table A and Table B (including pharmaceutically acceptable salts thereof, as well as enantiomers, stereoisomers, rotamers, tautomers, diastereomers, atropisomers or racemates thereof).

[0091] Additionally, a method of the invention includes administering to a subject an effective amount of an EF-Tu-modulating compound of the invention, e.g., EF-Tu-modulating compounds of Formula I, II, III, IV and V, as well as Table A and Table B (including pharmaceutically acceptable salts thereof, as well as enantiomers, stereoisomers, rotamers, tautomers, diastereomers, atropisomers or racemates thereof).

[0092] The term "alkyl" includes saturated aliphatic groups, including straight-chain alkyl groups (e.g., methyl, ethyl, propyl, butyl, pentyl, hexyl, heptyl, octyl, nonyl, decyl, etc.), branched-chain alkyl groups (isopropyl, tert-butyl, isobutyl, etc.), cycloalkyl (alicyclic) groups (cyclopropyl, cyclopentyl, cyclohexyl, cycloheptyl, cyclooctyl), alkyl substituted cycloalkyl groups, and cycloalkyl substituted alkyl groups. The term "alkyl" also includes alkenyl groups and alkynyl groups. Furthermore, the expression " C_x-C_y -alkyl", wherein x is 1-5 and y is 2-10 indicates a particular alkyl group (straight- or branched-chain) of a particular range of carbons. For example, the expression C_1-C_4 -alkyl includes, but is not limited to, methyl, ethyl, propyl, butyl, isopropyl, tert-butyl, isobutyl and sec-butyl. Moreover, the term C_{3-6} -cycloalkyl includes, but is not limited to, cyclopropyl, cyclopentyl, and cyclohexyl. As discussed below, these alkyl groups, as well as cycloalkyl groups, may be further substituted. " C_0-C_n -alkyl" refers to a single covalent bond (C_0) or an alkyl group having from 1 to n carbon atoms; for example " C_0-C_4 -alkyl" refers to a single covalent bond or a C_1-C_4 -alkyl group; " C_0-C_8 -alkyl" refers to a single covalent bond or a C_1-C_8 -alkyl group. In some instances, a substituent of an alkyl group is specifically indicated. For example, " C_1-C_4 -hydroxyalkyl" refers to a C_1-C_4 -alkyl group that has at least one hydroxy substituent.

[0093] "Alkylene" refers to a divalent alkyl group, as defined above. C_0-C_4 -alkylene is a single covalent bond or an alkylene group having from 1 to 4 carbon atoms; and C_0-C_6 -alkylene is a single covalent bond or an alkylene group having from 1 to 6 carbon atoms. "Alkenylene" and "Alkynylene" refer to divalent alkenyl and alkynyl groups respectively, as defined above.

[0094] A "cycloalkyl" is a group that comprises one or more saturated and/or partially saturated rings in which all ring members are carbon, such as cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, cycloheptyl, cyclooctyl, adamantyl, decahydro-naphthalenyl, octahydro-indenyl, and partially saturated variants of the foregoing, such as cyclohexenyl. Cycloalkyl groups do not comprise an aromatic ring or a heterocyclic ring. Certain cycloalkyl groups are C_3-C_8 -cycloalkyl, in which the group contains a single ring with from 3 to 8 ring members. A " $(C_3-C_8$ -cycloalkyl) C_0-C_4 -alkyl" is a C_3-C_8 -cycloalkyl group linked via a single covalent bond or a C_1-C_4 -alkylene group. In certain aspects, C_{3-6} -cycloalkyl groups are substituted one or more times (or preferably between one and five times) with substituents independently selected from a halogen atom, aryl, heteroaryl, trihalomethyl, C_{1-4} -alkoxy or C_{1-4} -alkyl.

[0095] Moreover, alkyl (e.g., methyl, ethyl, propyl, butyl, pentyl, hexyl, etc.) include both "unsubstituted alkyl" and "substituted alkyl", the latter of which refers to alkyl moieties having substituents replacing a hydrogen on one or more carbons of the hydrocarbon backbone, which allow the molecule to perform its intended function.

[0096] The term "substituted" is intended to describe moieties having substituents replacing a hydrogen on one or more atoms, e.g. C, O or N, of a molecule. Such substituents can include, for example, oxo, alkyl, alkoxy, alkenyl, alkynyl, halogen, hydroxyl, alkylcarbonyloxy, arylcarbonyloxy, alkoxy carbonyloxy, aryloxy carbonyloxy, carboxylate, alkylcarbonyl, arylcarbonyl, alkoxy carbonyl, aminocarbonyl, alkylaminocarbonyl, dialkylaminocarbonyl, alkylthiocarbonyl, alkoxy, phosphate, phosphonate, phosphinato, amino (including alkyl amino, dialkylamino, arylamino, diary-

lamino, and alkylaryl amino), acylamino (including alkylcarbonylamino, arylcarbonylamino, carbamoyl and ureido), amidino, imino, sulphydryl, alkylthio, arylthio, thiocarboxylate, sulfates, alkylsulfinyl, sulfonate, sulfamoyl, sulfonamido, nitro, trifluoromethyl, cyano, azido, heterocyclyl, alkylaryl, morpholino, phenol, benzyl, phenyl, piperazine, cyclopentane, cyclohexane, pyridine, 5H-tetrazole, triazole, piperidine, or an aromatic or heteroaromatic moiety, and any combination thereof.

[0097] Further examples of substituents of the invention, which are not intended to be limiting, include moieties selected from straight or branched alkyl (preferably C₁-C₅), cycloalkyl (preferably C₃-C₈), alkoxy (preferably C₁-C₆), thioalkyl (preferably C₁-C₆), alkenyl (preferably C₂-C₆), alkynyl (preferably C₂-C₆), heterocyclic, carbocyclic, aryl (e.g., phenyl), aryloxy (e.g., phenoxy), aralkyl (e.g., benzyl), aryloxyalkyl (e.g., phenyloxyalkyl), arylacetamidoyl, alkylaryl, heteroaralkyl, alkylcarbonyl and arylcarbonyl or other such acyl group, heteroarylcarbonyl, or heteroaryl group, (CR'R'')₀₋₃NR'R'' (e.g., —NH₂), (CR'R'')₀₋₃CN (e.g., —CN), —NO₂, halogen (e.g., —F, —Cl, —Br, or —I), (CR'R'')₀₋₃C (halogen)₃ (e.g., —CF₃), (CR'R'')₀₋₃CH(halogen)₂, (CR'R'')₀₋₃CH₂(halogen), (CR'R'')₀₋₃CONR'R'', (CR'R'')₀₋₃(CNH)NR'R'', (CR'R'')₀₋₃S(O)₁₋₂NR'R'', (CR'R'')₀₋₃CHO, (CR'R'')₀₋₃O(CR'R'')₀₋₃H, (CR'R'')₀₋₃S(O)₀₋₃R' (e.g., —SO₃H, —OSO₃H), (CR'R'')₀₋₃O(CR'R'')₀₋₃H (e.g., —CH₂OCH₃ and —OCH₃), (CR'R'')₀₋₃S(CR'R'')₀₋₃H (e.g., —SH and —SCH₃), (CR'R'')₀₋₃OH (e.g., —OH), (CR'R'')₀₋₃COR', (CR'R'')₀₋₃(substituted or unsubstituted phenyl), (CR'R'')₀₋₃(C₃-C₈ cycloalkyl), (CR'R'')₀₋₃CO₂R' (e.g., —CO₂H), or (CR'R'')₀₋₃OR' group, or the side chain of any naturally occurring amino acid; wherein R' and R'' are each independently hydrogen, a C₁-C₅ alkyl, C₂-C₅ alkenyl, C₂-C₅ alkynyl, or aryl group. Such substituents can include, for example, halogen, hydroxyl, alkylcarbonyloxy, arylcarbonyloxy, alkoxy-carbonyloxy, aryloxy-carbonyloxy, carboxylate, alkylcarbonyl, alkoxy-carbonyl, aminocarbonyl, alkylthiocarbonyl, alkoxy, phosphate, phosphonate, phosphinato, cyano, amino (including alkyl amino, dialkylamino, arylamino, diarylamino, and alkylaryl amino), acylamino (including alkylcarbonylamino, arylcarbonylamino, carbamoyl and ureido), amidino, imino, oxime, sulphydryl, alkylthio, arylthio, thiocarboxylate, sulfates, sulfonate, sulfamoyl, sulfonamido, nitro, trifluoromethyl, cyano, azido, heterocyclyl, or an aromatic or heteroaromatic moiety, and any combination thereof. In certain embodiments, a carbonyl moiety (C=O) may be further derivatized with an oxime moiety, e.g., an aldehyde moiety may be derivatized as its oxime (—C=N—OH) analog. It will be understood by those skilled in the art that the moieties substituted on the hydrocarbon chain can themselves be substituted, if appropriate. Cycloalkyls can be further substituted, e.g., with the substituents described above. An "aralkyl" moiety is an alkyl substituted with an aryl (e.g., phenylmethyl (i.e., benzyl)).

[0098] The term "alkenyl" includes unsaturated aliphatic groups analogous in length and possible substitution to the alkyls described above, but which contain at least one double bond.

[0099] For example, the term "alkenyl" includes straight-chain alkenyl groups (e.g., ethenyl, propenyl, butenyl, pentenyl, hexenyl, heptenyl, octenyl, nonenyl, decenyl, etc.), branched-chain alkenyl groups, cycloalkenyl (alicyclic) groups (cyclopropenyl, cyclopentenyl, cyclohexenyl, cycloheptenyl, cyclooctenyl), alkyl or alkenyl substituted

cycloalkenyl groups, and cycloalkyl or cycloalkenyl substituted alkenyl groups. The term alkenyl further includes alkenyl groups that include oxygen, nitrogen, sulfur or phosphorous atoms replacing one or more carbons of the hydrocarbon backbone. In certain embodiments, a straight chain or branched chain alkenyl group has 6 or fewer carbon atoms in its backbone (e.g., C₂-C₆ for straight chain, C₃-C₆ for branched chain). Likewise, cycloalkenyl groups may have from 3-8 carbon atoms in their ring structure, and more preferably have 5 or 6 carbons in the ring structure. The term C₂-C₆ includes alkenyl groups containing 2 to 6 carbon atoms.

[0100] Moreover, the term alkenyl includes both "unsubstituted alkenyls" and "substituted alkenyls", the latter of which refers to alkenyl moieties having substituents replacing a hydrogen on one or more carbons of the hydrocarbon backbone. Such substituents can include, for example, alkyl groups, alkynyl groups, halogens, hydroxyl, alkylcarbonyloxy, arylcarbonyloxy, alkoxy-carbonyloxy, aryloxy-carbonyloxy, carboxylate, alkylcarbonyl, arylcarbonyl, alkoxy-carbonyl, aminocarbonyl, alkylaminocarbonyl, dialkylaminocarbonyl, alkylthiocarbonyl, alkoxy, phosphate, phosphonate, phosphinato, cyano, amino (including alkyl amino, dialkylamino, arylamino, diarylamino, and alkylaryl amino), acylamino (including alkylcarbonylamino, arylcarbonylamino, carbamoyl and ureido), amidino, imino, sulphydryl, alkylthio, arylthio, thiocarboxylate, sulfates, alkylsulfinyl, sulfonate, sulfamoyl, sulfonamido, nitro, trifluoromethyl, cyano, azido, heterocyclyl, alkylaryl, or an aromatic or heteroaromatic moiety.

[0101] The term "alkynyl" includes unsaturated aliphatic groups analogous in length and possible substitution to the alkyls described above, but which contain at least one triple bond.

[0102] For example, the term "alkynyl" includes straight-chain alkynyl groups (e.g., ethynyl, propynyl, butynyl, pentynyl, hexynyl, heptynyl, octynyl, nonynyl, decynyl, etc.), branched-chain alkynyl groups, and cycloalkyl or cycloalkenyl substituted alkynyl groups. The term alkynyl further includes alkynyl groups that include oxygen, nitrogen, sulfur or phosphorous atoms replacing one or more carbons of the hydrocarbon backbone. In certain embodiments, a straight chain or branched chain alkynyl group has 6 or fewer carbon atoms in its backbone (e.g., C₂-C₆ for straight chain, C₃-C₆ for branched chain). The term C₂-C₆ includes alkynyl groups containing 2 to 6 carbon atoms.

[0103] Moreover, the term alkynyl includes both "unsubstituted alkynyls" and "substituted alkynyls", the latter of which refers to alkynyl moieties having substituents replacing a hydrogen on one or more carbons of the hydrocarbon backbone. Such substituents can include, for example, alkyl groups, alkynyl groups, halogens, hydroxyl, alkylcarbonyloxy, arylcarbonyloxy, alkoxy-carbonyloxy, aryloxy-carbonyloxy, carboxylate, alkylcarbonyl, arylcarbonyl, alkoxy-carbonyl, aminocarbonyl, alkylaminocarbonyl, dialkylaminocarbonyl, alkylthiocarbonyl, alkoxy, phosphate, phosphonate, phosphinato, cyano, amino (including alkyl amino, dialkylamino, arylamino, diarylamino, and alkylaryl amino), acylamino (including alkylcarbonylamino, arylcarbonylamino, carbamoyl and ureido), amidino, imino, sulphydryl, alkylthio, arylthio, thiocarboxylate, sulfates, alkylsulfinyl, sulfonate, sulfamoyl, sulfonamido, nitro, trifluoromethyl, cyano, azido, heterocyclyl, alkylaryl, or an aromatic or heteroaromatic moiety.

[0104] The term “amine” or “amino” should be understood as being broadly applied to both a molecule, or a moiety or functional group, as generally understood in the art, and may be primary, secondary, or tertiary. The term “amine” or “amino” includes compounds where a nitrogen atom is covalently bonded to at least one carbon, hydrogen or heteroatom. The terms include, for example, but are not limited to, “alkylamino,” “arylamino,” “diarylamino,” “alkylarylamino,” “alkylaminoaryl,” “arylaminoalkyl,” “alkaminooalkyl,” “amide,” “amido,” and “aminocarbonyl.” The term “alkyl amino” comprises groups and compounds wherein the nitrogen is bound to at least one additional alkyl group. The term “dialkyl amino” includes groups wherein the nitrogen atom is bound to at least two additional alkyl groups. The term “arylamino” and “diarylamino” include groups wherein the nitrogen is bound to at least one or two aryl groups, respectively. The term “alkylarylamino,” “alkylaminoaryl” or “arylaminoalkyl” refers to an amino group which is bound to at least one alkyl group and at least one aryl group. The term “alkaminooalkyl” refers to an alkyl, alkenyl, or alkynyl group bound to a nitrogen atom which is also bound to an alkyl group.

[0105] The term “amide,” “amido” or “aminocarbonyl” includes compounds or moieties which contain a nitrogen atom which is bound to the carbon of a carbonyl or a thiocarbonyl group. The term includes “alkaminocarbonyl” or “alkylaminocarbonyl” groups which include alkyl, alkenyl, aryl or alkynyl groups bound to an amino group bound to a carbonyl group. It includes arylaminocarbonyl and arylcarboylamino groups which include aryl or heteroaryl moieties bound to an amino group which is bound to the carbon of a carbonyl or thiocarbonyl group. The terms “alkylaminocarbonyl,” “alkenylaminocarbonyl,” “alkynylaminocarbonyl,” “arylamino carbonyl,” “alkylcarbonylamino,” “alkenylcarbonylamino,” “alkynylcarbonylamino,” and “arylcarbonylamino” are included in term “amide.” Amides also include urea groups (aminocarbonylamino) and carbamates (oxycarbonylamino).

[0106] The term “aryl” includes groups, including 5- and 6-membered single-ring aromatic groups that may include from zero to four heteroatoms, for example, phenyl, pyrrole, furan, thiophene, thiazole, isothiazole, imidazole, triazole, tetrazole, pyrazole, oxazole, isoxazole, pyridine, pyrazine, pyridazine, and pyrimidine, and the like. Furthermore, the term “aryl” includes multicyclic aryl groups, e.g., tricyclic, bicyclic, e.g., naphthalene, benzoxazole, benzodioxazole, benzothiazole, benzoimidazole, benzothiophene, methylenedioxyphe nyl, quinoline, isoquinoline, anthryl, phenanthryl, naphthridine, indole, benzofuran, purine, benzofuran, deazapurine, or indolizine. Those aryl groups having heteroatoms in the ring structure may also be referred to as “aryl heterocycles,” “heterocycles,” “heteroaryls” or “heteroaromatics.” The aromatic ring can be substituted at one or more ring positions with such substituents as described above, as for example, alkyl, halogen, hydroxyl, alkoxy, alkylcarbonyloxy, arylcarbonyloxy, alkoxycarbonyloxy, aryloxy carbonyloxy, carboxylate, alkylcarbonyl, alkylamino carbonyl, aralkylaminocarbonyl, alkenylaminocarbonyl, alkylcarbonyl, arylcarbonyl, aralkylcarbonyl, alkenylcarbonyl, alkoxy carbonyl, aminocarbonyl, alkylthiocarbonyl, phosphate, phosphonate, phosphinate, cyano, amino (including alkyl amino, dialkylamino, arylamino, diarylamino, and alkylarylamino), acylamino (including alkylcarbonylamino, arylcarbonylamino, carbamoyl and ureido), amidino, imino, sulfhy-

dryl, alkylthio, arylthio, thiocarboxylate, sulfates, alkylsulfanyl, sulfonate, sulfamoyl, sulfonamido, nitro, trifluoromethyl, cyano, azido, heterocyclyl, alkylaryl, or an aromatic or heteroaromatic moiety. Aryl groups can also be fused or bridged with alicyclic or heterocyclic rings which are not aromatic so as to form a polycycle (e.g., tetralin).

[0107] The term heteroaryl, as used herein, represents a stable monocyclic or bicyclic ring of up to 7 atoms in each ring, wherein at least one ring is aromatic and contains from 1 to 4 heteroatoms selected from the group consisting of O, N and S. Heteroaryl groups within the scope of this definition include but are not limited to: acridinyl, carbazoyl, cinnolinyl, quinoxalinyl, pyrrazolyl, indolyl, benzotriazolyl, furanyl, thienyl, benzothiophenyl, benzofuranyl, quinolinyl, isoquinolinyl, oxazolyl, isoxazolyl, indolyl, pyrazinyl, pyridazinyl, pyridinyl, pyrimidinyl, pyrrolyl, tetrahydroquinoline. As with the definition of heterocycle below, “heteroaryl” is also understood to include the N-oxide derivative of any nitrogen-containing heteroaryl. In cases where the heteroaryl substituent is bicyclic and one ring is non-aromatic or contains no heteroatoms, it is understood that attachment is via the aromatic ring or via the heteroatom containing ring, respectively.

[0108] The term “heterocycle” or “heterocyclyl” as used herein is intended to mean a 5- to 10-membered aromatic or nonaromatic heterocycle containing from 1 to 4 heteroatoms selected from the group consisting of O, N and S, and includes bicyclic groups. “Heterocyclyl” therefore includes the above mentioned heteroaryls, as well as dihydro and tetrahydro analogs thereof. Further examples of “heterocyclyl” include, but are not limited to the following: benzoimidazolyl, benzofuranyl, benzofurazanyl, benzopyrazolyl, benzotriazolyl, benzothiophenyl, benzoxazolyl, carbazoyl, carbolinyl, cinnolinyl, furanyl, imidazolyl, indolinyl, indolyl, indolaziny l, indazolyl, isobenzofuranyl, isoindolyl, isoquinolyl, isothiazolyl, isoxazolyl, naphthpyridinyl, oxadiazolyl, oxazolyl, oxazoline, isoxazoline, oxetanyl, pyranyl, pyrazinyl, pyrazolyl, pyridazinyl, pyridopyridinyl, pyridazinyl, pyridyl, pyrimidyl, pyrrolyl, quinazolinyl, quinolyl, quinoxalinyl, tetrahydropyranyl, tetrazolyl, tetrazolopyridyl, thiadiazolyl, thiazolyl, thienyl, triazolyl, azetidiny l, 1,4-dioxanyl, hexahydroazepinyl, piperazinyl, piperidinyl, pyridin-2-onyl, pyrrolidinyl, morpholinyl, thiomorpholinyl, dihydrobenzoimidazolyl, dihydrobenzofuranyl, dihydrobenzothiophenyl, dihydrobenzoxazolyl, dihydrofuranyl, dihydroimidazolyl, dihydroindolyl, dihydroisoxazolyl, dihydroisothiazolyl, dihydrooxadiazolyl, dihydrooxazolyl, dihydropyrazinyl, dihydropyrazolyl, dihydropyridinyl, dihydropyrimidinyl, dihydropyrrolyl, dihydroquinolinyl, dihydrotetrazolyl, dihydrothiadiazolyl, dihydrothiazolyl, dihydrothienyl, dihydrotriazolyl, dihydroazetidiny l, methylenedioxybenzoyl, tetrahydrofuranyl, and tetrahydrothienyl, and N-oxides thereof. Attachment of a heterocyclyl substituent can occur via a carbon atom or via a heteroatom.

[0109] The term “acyl” includes compounds and moieties which contain the acyl radical ($\text{CH}_3\text{CO}-$) or a carbonyl group. The term “substituted acyl” includes acyl groups where one or more of the hydrogen atoms are replaced by for example, alkyl groups, alkynyl groups, halogens, hydroxyl, alkylcarbonyloxy, arylcarbonyloxy, alkoxycarbonyloxy, aryloxy carbonyloxy, carboxylate, alkylcarbonyl, arylcarbonyl, alkoxycarbonyl, aminocarbonyl, alkylaminocarbonyl, dialkylaminocarbonyl, alkylthiocarbonyl, alkoxy l, phosphate, phosphonate, phosphinate, cyano, amino (including

alkyl amino, dialkylamino, arylamino, diarylamino, and alkylarylamino), acylamino (including alkylcarbonylamino, arylcarbonylamino, carbamoyl and ureido), amidino, imino, sulfhydryl, alkylthio, arylthio, thiocarboxylate, sulfates, alkylsulfanyl, sulfonato, sulfamoyl, sulfonamido, nitro, trifluoromethyl, cyano, azido, heterocyclyl, alkylaryl, or an aromatic or heteroaromatic moiety.

[0110] The term “acylamino” includes moieties wherein an acyl moiety is bonded to an amino group. For example, the term includes alkylcarbonylamino, arylcarbonylamino, carbamoyl and ureido groups.

[0111] The term “alkoxy” includes substituted and unsubstituted alkyl, alkenyl, and alkynyl groups covalently linked to an oxygen atom. Examples of alkoxy groups include methoxy, ethoxy, isopropoxy, propoxy, butoxy, and pentoxy groups and may include cyclic groups such as cyclopentoxy. Examples of substituted alkoxy groups include halogenated alkoxy groups. The alkoxy groups can be substituted with groups such as alkenyl, alkynyl, halogen, hydroxyl, alkylcarbonyloxy, arylcarbonyloxy, alkoxycarbonyloxy, aryloxy carbonyloxy, carboxylate, alkylcarbonyl, arylcarbonyl, alkoxy carbonyl, aminocarbonyl, alkylaminocarbonyl, dialkylaminocarbonyl, alkylthiocarbonyl, alkoxy, phosphate, phosphonato, phosphinato, cyano, amino (including alkyl amino, dialkylamino, arylamino, diarylamino, and alkylarylamino), acylamino (including alkylcarbonylamino, arylcarbonylamino, carbamoyl and ureido), amidino, imino, sulfhydryl, alkylthio, arylthio, thiocarboxylate, sulfates, alkylsulfanyl, sulfonato, sulfamoyl, sulfonamido, nitro, trifluoromethyl, cyano, azido, heterocyclyl, alkylaryl, or an aromatic or heteroaromatic moieties. Examples of halogen substituted alkoxy groups include, but are not limited to, fluoromethoxy, difluoromethoxy, trifluoromethoxy, chloromethoxy, dichloromethoxy, trichloromethoxy, etc.

[0112] The term “carbonyl” or “carboxy” includes compounds and moieties which contain a carbon connected with a double bond to an oxygen atom, and tautomeric forms thereof. Examples of moieties that contain a carbonyl include aldehydes, ketones, carboxylic acids, amides, esters, anhydrides, etc. The term “carboxy moiety” or “carbonyl moiety” refers to groups such as “alkylcarbonyl” groups wherein an alkyl group is covalently bound to a carbonyl group, “alkenylcarbonyl” groups wherein an alkenyl group is covalently bound to a carbonyl group, “alkynylcarbonyl” groups wherein an alkynyl group is covalently bound to a carbonyl group, “arylcarbonyl” groups wherein an aryl group is covalently attached to the carbonyl group. Furthermore, the term also refers to groups wherein one or more heteroatoms are covalently bonded to the carbonyl moiety. For example, the term includes moieties such as, for example, aminocarbonyl moieties, (wherein a nitrogen atom is bound to the carbon of the carbonyl group, e.g., an amide), aminocarbonyloxy moieties, wherein an oxygen and a nitrogen atom are both bond to the carbon of the carbonyl group (e.g., also referred to as a “carbamate”). Furthermore, aminocarbonylamino groups (e.g., ureas) are also include as well as other combinations of carbonyl groups bound to heteroatoms (e.g., nitrogen, oxygen, sulfur, etc. as well as carbon atoms). Furthermore, the heteroatom can be further substituted with one or more alkyl, alkenyl, alkynyl, aryl, aralkyl, acyl, etc. moieties.

[0113] The term “thiocarbonyl” or “thiocarboxy” includes compounds and moieties which contain a carbon connected with a double bond to a sulfur atom. The term “thiocarbonyl

moiety” includes moieties that are analogous to carbonyl moieties. For example, “thiocarbonyl” moieties include aminothiocarbonyl, wherein an amino group is bound to the carbon atom of the thiocarbonyl group, furthermore other thiocarbonyl moieties include, oxythiocarbonyls (oxygen bound to the carbon atom), aminothiocarbonylamino groups, etc.

[0114] The term “ether” includes compounds or moieties that contain an oxygen bonded to two different carbon atoms or heteroatoms. For example, the term includes “alkoxyalkyl” which refers to an alkyl, alkenyl, or alkynyl group covalently bonded to an oxygen atom that is covalently bonded to another alkyl group.

[0115] The term “ester” includes compounds and moieties that contain a carbon or a heteroatom bound to an oxygen atom that is bonded to the carbon of a carbonyl group. The term “ester” includes alkoxycarboxy groups such as methoxycarbonyl, ethoxycarbonyl, propoxycarbonyl, butoxycarbonyl, pentoxycarbonyl, etc. The alkyl, alkenyl, or alkynyl groups are as defined above.

[0116] The term “thioether” includes compounds and moieties which contain a sulfur atom bonded to two different carbon or hetero atoms. Examples of thioethers include, but are not limited to alkthioalkyls, alkthioalkenyls, and alkthioalkynyls. The term “alkthioalkyls” include compounds with an alkyl, alkenyl, or alkynyl group bonded to a sulfur atom that is bonded to an alkyl group. Similarly, the term “alkthioalkenyls” and “alkthioalkynyls” refer to compounds or moieties wherein an alkyl, alkenyl, or alkynyl group is bonded to a sulfur atom which is covalently bonded to an alkynyl group.

[0117] The term “hydroxy” or “hydroxyl” includes groups with an —OH or —O⁻.

[0118] The term “halogen” includes fluorine, bromine, chlorine, iodine, etc. The term “perhalogenated” generally refers to a moiety wherein all hydrogens are replaced by halogen atoms.

[0119] The terms “polycyclyl” or “polycyclic radical” include moieties with two or more rings (e.g., cycloalkyls, cycloalkenyls, cycloalkynyls, aryls and/or heterocyclyls) in which two or more carbons are common to two adjoining rings, e.g., the rings are “fused rings”. Rings that are joined through non-adjacent atoms are termed “bridged” rings. Each of the rings of the polycycle can be substituted with such substituents as described above, as for example, halogen, hydroxyl, alkylcarbonyloxy, arylcarbonyloxy, alkoxycarbonyloxy, aryloxy carbonyloxy, carboxylate, alkylcarbonyl, alkoxycarbonyl, alkylaminocarbonyl, aralkylaminocarbonyl, alkenylaminocarbonyl, alkylcarbonyl, arylcarbonyl, aralkylcarbonyl, alkenylcarbonyl, aminocarbonyl, alkylthiocarbonyl, alkoxy, phosphate, phosphonato, phosphinato, cyano, amino (including alkyl amino, dialkylamino, arylamino, diarylamino, and alkylarylamino), acylamino (including alkylcarbonylamino, arylcarbonylamino, carbamoyl and ureido), amidino, imino, sulfhydryl, alkylthio, arylthio, thiocarboxylate, sulfates, alkylsulfanyl, sulfonato, sulfamoyl, sulfonamido, nitro, trifluoromethyl, cyano, azido, heterocyclyl, alkyl, alkylaryl, or an aromatic or heteroaromatic moiety.

[0120] The term “heteroatom” includes atoms of any element other than carbon or hydrogen. Preferred heteroatoms are nitrogen, oxygen, sulfur and phosphorus.

[0121] Additionally, the phrase “any combination thereof” implies that any number of the listed functional groups and molecules may be combined to create a larger molecular

architecture. For example, the terms “phenyl,” “carbonyl” (or “=O”), “—O—,” “—OH,” and C_{1-6} (i.e., $—CH_3$ and $—CH_2CH_2CH_2—$) can be combined to form a 3-methoxy-4-propoxybenzoic acid substituent. It is to be understood that when combining functional groups and molecules to create a larger molecular architecture, hydrogens can be removed or added, as required to satisfy the valence of each atom.

[0122] It is to be understood that all of the compounds of the invention described above will further include bonds between adjacent atoms and/or hydrogens as required to satisfy the valence of each atom. That is, bonds and/or hydrogen atoms are added to provide the following number of total bonds to each of the following types of atoms: carbon: four bonds; nitrogen: three bonds; oxygen: two bonds; and sulfur: two-six bonds.

[0123] It will be noted that the structures of some of the compounds of this invention include asymmetric carbon atoms. It is to be understood accordingly that the isomers arising from such asymmetry (e.g., all enantiomers, stereoisomers, rotamers, tautomers, diastereomers, or racemates) are included within the scope of this invention. Such isomers can be obtained in substantially pure form by classical separation techniques and by stereochemically controlled synthesis. Furthermore, the structures and other compounds and moieties discussed in this application also include all tautomers thereof. Compounds described herein may be obtained through art recognized synthesis strategies.

[0124] It will also be noted that the substituents of some of the compounds of this invention include isomeric cyclic structures. It is to be understood accordingly that constitutional isomers of particular substituents are included within the scope of this invention, unless otherwise. For example, the term “tetrazole” includes tetrazole, 2H-tetrazole, 3H-tetrazole, tetrazole, 4H-tetrazole and 5H-tetrazole.

Use in Bacterial Infection

[0125] The compounds of the present invention have valuable pharmacological properties and are useful in the treatment of diseases. In certain embodiments, compounds of the invention are useful in the treatment of bacterial infections.

[0126] The term “use” includes any one or more of the following embodiments of the invention, respectively: the use in the treatment of bacterial infections; the use for the manufacture of pharmaceutical compositions for use in the treatment of these diseases, e.g., in the manufacture of a medicament; methods of use of compounds of the invention in the treatment of these diseases; pharmaceutical preparations having compounds of the invention for the treatment of these diseases; and compounds of the invention for use in the treatment of these diseases; as appropriate and expedient, if not stated otherwise. In particular, diseases to be treated and are thus preferred for use of a compound of the present invention are selected from bacterial infections, as well as those diseases that depend on the activity of EF-Tu. The term “use” further includes embodiments of compositions herein which bind to an EF-Tu protein sufficiently to serve as tracers or labels, so that when coupled to a fluor or tag, or made radioactive, can be used as a research reagent or as a diagnostic or an imaging agent.

[0127] In certain embodiments, a compound of the present invention is used for treating EF-Tu-associated diseases, and use of the compound of the present invention as an inhibitor of

any one or more EF-Tu proteins. It is envisioned that a use can be a treatment of inhibiting one or more isoforms of EF-Tu.

Assays

[0128] The inhibition of antibacterial activity by the compounds of the invention may be measured using a number of assays available in the art. An example of such an assay is the standard minimum inhibitory concentration (MIC) test conducted according to CSLI guidelines.

Pharmaceutical Compositions

[0129] The language “effective amount” of the compound is that amount necessary or sufficient to treat or prevent a bacterial infection, e.g. prevent the various morphological and somatic symptoms of a bacterial infection, and/or a disease or condition described herein. In an example, an effective amount of the compound of the invention is the amount sufficient to treat a bacterial infection in a subject. The effective amount can vary depending on such factors as the size and weight of the subject, the type of illness, or the particular compound of the invention. For example, the choice of the compound of the invention can affect what constitutes an “effective amount.” One of ordinary skill in the art would be able to study the factors contained herein and make the determination regarding the effective amount of the compounds of the invention without undue experimentation.

[0130] The regimen of administration can affect what constitutes an effective amount. The compound of the invention can be administered to the subject either prior to or after the onset of a bacterial infection. Further, several divided dosages, as well as staggered dosages, can be administered daily or sequentially, or the dose can be continuously infused, or can be a bolus injection. Further, the dosages of the compound(s) of the invention can be proportionally increased or decreased as indicated by the exigencies of the therapeutic or prophylactic situation.

[0131] Compounds of the invention may be used in the treatment of states, disorders or diseases as described herein, or for the manufacture of pharmaceutical compositions for use in the treatment of these diseases. Methods of use of compounds of the present invention in the treatment of these diseases, or pharmaceutical preparations having compounds of the present invention for the treatment of these diseases.

[0132] The language “pharmaceutical composition” includes preparations suitable for administration to mammals, e.g., humans. When the compounds of the present invention are administered as pharmaceuticals to mammals, e.g., humans, they can be given per se or as a pharmaceutical composition containing, for example, 0.1 to 99.5% (more preferably, 0.5 to 90%) of active ingredient in combination with a pharmaceutically acceptable carrier.

[0133] The phrase “pharmaceutically acceptable carrier” is art recognized and includes a pharmaceutically acceptable material, composition or vehicle, suitable for administering compounds of the present invention to mammals. The carriers include liquid or solid filler, diluent, excipient, solvent or encapsulating material, involved in carrying or transporting the subject agent from one organ, or portion of the body, to another organ, or portion of the body. Each carrier must be “acceptable” in the sense of being compatible with the other ingredients of the formulation and not injurious to the patient. Some examples of materials which can serve as pharmaceutically acceptable carriers include: sugars, such as lactose,

glucose and sucrose; starches, such as corn starch and potato starch; cellulose, and its derivatives, such as sodium carboxymethyl cellulose, ethyl cellulose and cellulose acetate; powdered tragacanth; malt; gelatin; talc; excipients, such as cocoa butter and suppository waxes; oils, such as peanut oil, cottonseed oil, safflower oil, sesame oil, olive oil, corn oil and soybean oil; glycols, such as propylene glycol; polyols, such as glycerin, sorbitol, mannitol and polyethylene glycol; esters, such as ethyl oleate and ethyl laurate; agar; buffering agents, such as magnesium hydroxide and aluminum hydroxide; alginic acid; pyrogen-free water; isotonic saline; Ringer's solution; ethyl alcohol; phosphate buffer solutions; and other non-toxic compatible substances employed in pharmaceutical formulations.

[0134] Wetting agents, emulsifiers and lubricants, such as sodium lauryl sulfate and magnesium stearate, as well as coloring agents, release agents, coating agents, sweetening, flavoring and perfuming agents, preservatives and antioxidants can also be present in the compositions.

[0135] Examples of pharmaceutically acceptable antioxidants include: water soluble antioxidants, such as ascorbic acid, cysteine hydrochloride, sodium bisulfate, sodium metabisulfite, sodium sulfite and the like; oil-soluble antioxidants, such as ascorbyl palmitate, butylated hydroxyanisole (BHA), butylated hydroxytoluene (BHT), lecithin, propyl gallate, α -tocopherol, and the like; and metal chelating agents, such as citric acid, ethylenediamine tetraacetic acid (EDTA), sorbitol, tartaric acid, phosphoric acid, and the like.

[0136] Formulations of the present invention include those suitable for oral, nasal, topical, buccal, sublingual, rectal, vaginal and/or parenteral administration. The formulations may conveniently be presented in unit dosage form and may be prepared by any methods well known in the art of pharmacy. The amount of active ingredient that can be combined with a carrier material to produce a single dosage form will generally be that amount of the compound that produces a therapeutic effect. Generally, out of one hundred per cent, this amount will range from about 1 per cent to about ninety-nine percent of active ingredient, preferably from about 5 per cent to about 70 per cent, most preferably from about 10 per cent to about 30 per cent.

[0137] Methods of preparing these formulations or compositions include the step of bringing into association a compound of the present invention with the carrier and, optionally, one or more accessory ingredients. In general, the formulations are prepared by uniformly and intimately bringing into association a compound of the present invention with liquid carriers, or finely divided solid carriers, or both, and then, if necessary, shaping the product.

[0138] Formulations of the invention suitable for oral administration may be in the form of capsules, cachets, pills, tablets, lozenges (using a flavored basis, usually sucrose and acacia or tragacanth), powders, granules, or as a solution or a suspension in an aqueous or non-aqueous liquid, or as an oil-in-water or water-in-oil liquid emulsion, or as an elixir or syrup, or as pastilles (using an inert base, such as gelatin and glycerin, or sucrose and acacia) and/or as mouth washes and the like, each containing a predetermined amount of a compound of the present invention as an active ingredient. A compound of the present invention may also be administered as a bolus, electuary or paste.

[0139] In solid dosage forms of the invention for oral administration (capsules, tablets, pills, dragees, powders, granules and the like), the active ingredient is mixed with one or more pharmaceutically acceptable carriers, such as sodium citrate or dicalcium phosphate, and/or any of the following: fillers or extenders, such as starches, lactose, sucrose, glu-

cose, mannitol, and/or silicic acid; binders, such as, for example, carboxymethylcellulose, alginates, gelatin, polyvinyl pyrrolidone, sucrose and/or acacia; humectants, such as glycerol; disintegrating agents, such as agar-agar, calcium carbonate, potato or tapioca starch, alginic acid, certain silicates, and sodium carbonate; solution retarding agents, such as paraffin; absorption accelerators, such as quaternary ammonium compounds; wetting agents, such as, for example, cetyl alcohol and glycerol monostearate; absorbents, such as kaolin and bentonite clay; lubricants, such as talc, calcium stearate, magnesium stearate, solid polyethylene glycols, sodium lauryl sulfate, and mixtures thereof; and coloring agents. In the case of capsules, tablets and pills, the pharmaceutical compositions may also comprise buffering agents. Solid compositions of a similar type may also be employed as fillers in soft and hard-filled gelatin capsules using such excipients as lactose or milk sugars, as well as high molecular weight polyethylene glycols and the like.

[0140] A tablet may be made by compression or molding, optionally with one or more accessory ingredients. Compressed tablets may be prepared using binder (for example, gelatin or hydroxypropylmethyl cellulose), lubricant, inert diluent, preservative, disintegrant (for example, sodium starch glycolate or cross-linked sodium carboxymethyl cellulose), surface-active or dispersing agent. Molded tablets may be made by molding in a suitable machine a mixture of the powdered compound moistened with an inert liquid diluent.

[0141] The tablets, and other solid dosage forms of the pharmaceutical compositions of the present invention, such as dragees, capsules, pills and granules, may optionally be scored or prepared with coatings and shells, such as enteric coatings and other coatings well known in the pharmaceutical-formulating art. They may also be formulated so as to provide slow or controlled release of the active ingredient therein using, for example, hydroxypropylmethyl cellulose in varying proportions to provide the desired release profile, other polymer matrices, liposomes and/or microspheres. They may be sterilized by, for example, filtration through a bacteria-retaining filter, or by incorporating sterilizing agents in the form of sterile solid compositions that can be dissolved in sterile water, or some other sterile injectable medium immediately before use. These compositions may also optionally contain opacifying agents and may be of a composition that they release the active ingredient(s) only, or preferentially, in a certain portion of the gastrointestinal tract, optionally, in a delayed manner. Examples of embedding compositions that can be used include polymeric substances and waxes. The active ingredient can also be in micro-encapsulated form, if appropriate, with one or more of the above-described excipients.

[0142] Liquid dosage forms for oral administration of the compounds of the invention include pharmaceutically acceptable emulsions, microemulsions, solutions, suspensions, syrups and elixirs. In addition to the active ingredient, the liquid dosage forms may contain inert diluent commonly used in the art, such as, for example, water or other solvents, solubilizing agents and emulsifiers, such as ethyl alcohol, isopropyl alcohol, ethyl carbonate, ethyl acetate, benzyl alcohol, benzyl benzoate, propylene glycol, 1,3-butylene glycol, oils (in particular, cottonseed, groundnut, corn, germ, olive, castor and sesame oils), glycerol, tetrahydrofuryl alcohol, polyethylene glycols and fatty acid esters of sorbitan, and mixtures thereof.

[0143] Besides inert diluents, the oral compositions can also include adjuvants such as wetting agents, emulsifying

and suspending agents, sweetening, flavoring, coloring, perfuming and preservative agents.

[0144] Suspensions, in addition to the active compounds, may contain suspending agents as, for example, ethoxylated isostearyl alcohols, polyoxyethylene sorbitol and sorbitan esters, microcrystalline cellulose, aluminum metahydroxide, bentonite, agar-agar and tragacanth, and mixtures thereof.

[0145] Formulations of the pharmaceutical compositions of the invention for rectal or vaginal administration may be presented as a suppository, which may be prepared by mixing one or more compounds of the invention with one or more suitable nonirritating excipients or carriers comprising, for example, cocoa butter, polyethylene glycol, a suppository wax or a salicylate, and which is solid at room temperature, but liquid at body temperature and, therefore, will melt in the rectum or vaginal cavity and release the active compound.

[0146] Formulations of the present invention which are suitable for vaginal administration also include pessaries, tampons, creams, gels, pastes, foams or spray formulations containing such carriers as are known in the art to be appropriate.

[0147] Dosage forms for the topical or transdermal administration of a compound of this invention include powders, sprays, ointments, pastes, creams, lotions, gels, solutions, patches and inhalants. The active compound may be mixed under sterile conditions with a pharmaceutically acceptable carrier, and with any preservatives, buffers, or propellants that may be required.

[0148] The ointments, pastes, creams and gels may contain, in addition to an active compound of this invention, excipients, such as animal and vegetable fats, oils, waxes, paraffins, starch, tragacanth, cellulose derivatives, polyethylene glycols, silicones, bentonites, silicic acid, talc and zinc oxide, or mixtures thereof.

[0149] Powders and sprays can contain, in addition to a compound of this invention, excipients such as lactose, talc, silicic acid, aluminum hydroxide, calcium silicates and polyamide powder, or mixtures of these substances. Sprays can additionally contain customary propellants, such as chlorofluorohydrocarbons and volatile unsubstituted hydrocarbons, such as butane and propane.

[0150] Transdermal patches have the added advantage of providing controlled delivery of a compound of the present invention to the body. Such dosage forms can be made by dissolving or dispersing the compound in the proper medium. Absorption enhancers can also be used to increase the flux of the compound across the skin. The rate of such flux can be controlled by either providing a rate controlling membrane or dispersing the active compound in a polymer matrix or gel.

[0151] Ophthalmic formulations, eye ointments, powders, solutions and the like, are also contemplated as being within the scope of this invention.

[0152] Pharmaceutical compositions of this invention suitable for parenteral administration comprise one or more compounds of the invention in combination with one or more pharmaceutically acceptable sterile isotonic aqueous or non-aqueous solutions, dispersions, suspensions or emulsions, or sterile powders which may be reconstituted into sterile injectable solutions or dispersions just prior to use, which may contain antioxidants, buffers, bacteriostats, solutes which render the formulation isotonic with the blood of the intended recipient or suspending or thickening agents.

[0153] Examples of suitable aqueous and nonaqueous carriers that may be employed in the pharmaceutical compositions of the invention include water, ethanol, polyols (such as glycerol, propylene glycol, polyethylene glycol, and the like), and suitable mixtures thereof, vegetable oils, such as olive oil,

and injectable organic esters, such as ethyl oleate. Proper fluidity can be maintained, for example, by the use of coating materials, such as lecithin, by the maintenance of the required particle size in the case of dispersions, and by the use of surfactants.

[0154] These compositions may also contain adjuvants such as preservatives, wetting agents, emulsifying agents and dispersing agents. Prevention of the action of microorganisms may be ensured by the inclusion of various antibacterial and antifungal agents, for example, paraben, chlorobutanol, phenol sorbic acid, and the like. It may also be desirable to include isotonic agents, such as sugars, sodium chloride, and the like into the compositions. In addition, prolonged absorption of the injectable pharmaceutical form may be brought about by the inclusion of agents that delay absorption such as aluminum monostearate and gelatin.

[0155] In some cases, in order to prolong the effect of a drug, it is desirable to slow the absorption of the drug from subcutaneous or intramuscular injection. This may be accomplished by the use of a liquid suspension of crystalline or amorphous material having poor water solubility. The rate of absorption of the drug then depends upon its rate of dissolution which, in turn, may depend upon crystal size and crystalline form. Alternatively, delayed absorption of a parenterally-administered drug form is accomplished by dissolving or suspending the drug in an oil vehicle.

[0156] Injectable depot forms are made by forming microcapsule matrices of the subject compounds in biodegradable polymers such as polylactide-polyglycolide. Depending on the ratio of drug to polymer, and the nature of the particular polymer employed, the rate of drug release can be controlled. Examples of other biodegradable polymers include poly(orthoesters) and poly(anhydrides). Depot injectable formulations are also prepared by entrapping the drug in liposomes or microemulsions that are compatible with body tissue.

[0157] The preparations of the present invention may be given orally, parenterally, topically, or rectally. They are of course given by forms suitable for each administration route. For example, they are administered in tablets or capsule form, by injection, inhalation, eye lotion, ointment, suppository, etc., administration by injection, infusion or inhalation; topical by lotion or ointment; and rectal by suppositories. Oral and/or IV administration is preferred.

[0158] The phrases "parenteral administration" and "administered parenterally" as used herein means modes of administration other than enteral and topical administration, usually by injection, and includes, without limitation, intravenous, intramuscular, intraarterial, intrathecal, intracapsular, intraorbital, intracardiac, intradermal, intraperitoneal, transtracheal, subcutaneous, subcuticular, intraarticular, subcapsular, subarachnoid, intraspinal and intrasternal injection and infusion.

[0159] The phrases "systemic administration," "administered systemically," "peripheral administration" and "administered peripherally" as used herein mean the administration of a compound, drug or other material other than directly into the central nervous system, such that it enters the patient's system and, thus, is subject to metabolism and other like processes, for example, subcutaneous administration.

[0160] These compounds may be administered to humans and other animals for therapy by any suitable route of administration, including orally, nasally, as by, for example, a spray, rectally, intravaginally, parenterally, intracisternally and topically, as by powders, ointments or drops, including buccally and sublingually.

[0161] Regardless of the route of administration selected, the compounds of the present invention, which may be used in a suitable hydrated form, and/or the pharmaceutical compositions of the present invention, are formulated into pharmaceutically acceptable dosage forms by conventional methods known to those of skill in the art.

[0162] Actual dosage levels of the active ingredients in the pharmaceutical compositions of this invention may be varied so as to obtain an amount of the active ingredient which is effective to achieve the desired therapeutic response for a particular patient, composition, and mode of administration, without being toxic to the patient.

[0163] The selected dosage level will depend upon a variety of factors including the activity of the particular compound of the present invention employed, or the ester, salt or amide thereof, the route of administration, the time of administration, the rate of excretion of the particular compound being employed, the duration of the treatment, other drugs, compounds and/or materials used in combination with the particular compound employed, the age, sex, weight, condition, general health and prior medical history of the patient being treated, and like factors well known in the medical arts.

[0164] A physician or veterinarian having ordinary skill in the art can readily determine and prescribe the effective amount of the pharmaceutical composition required. For example, the physician or veterinarian could start doses of the compounds of the invention employed in the pharmaceutical composition at levels lower than that required in order to achieve the desired therapeutic effect and gradually increase the dosage until the desired effect is achieved.

[0165] In general, a suitable daily dose of a compound of the invention will be that amount of the compound that is the lowest dose effective to produce a therapeutic effect. Such an effective dose will generally depend upon the factors described above. Generally, intravenous and subcutaneous doses of the compounds of this invention for a patient, when used for the indicated analgesic effects, will range from about 0.0001 to about 100 mg per kilogram of body weight per day, more preferably from about 0.01 to about 50 mg per kg per day, and still more preferably from about 1.0 to about 100 mg per kg per day. An effective amount is that amount treats a bacterial infection.

[0166] If desired, the effective daily dose of the active compound may be administered as two, three, four, five, six or more sub-doses administered separately at appropriate intervals throughout the day, optionally, in unit dosage forms.

[0167] While it is possible for a compound of the present invention to be administered alone, it is preferable to administer the compound as a pharmaceutical composition.

Synthetic Procedure

[0168] Compounds of the present invention are prepared from commonly available compounds using procedures known to those skilled in the art, including any one or more of the following conditions without limitation:

[0169] Within the scope of this text, only a readily removable group that is not a constituent of the particular desired end product of the compounds of the present invention is designated a "protecting group," unless the context indicates otherwise. The protection of functional groups by such protecting groups, the protecting groups themselves, and their cleavage reactions are described for example in standard reference works, such as e.g., *Science of Synthesis: Houben-Weyl Methods of Molecular Transformation*. Georg Thieme Verlag, Stuttgart, Germany. 2005. 41627 pp. (URL: <http://www.science-of-synthesis.com> (Electronic Version, 48 Volumes)); J. F. W. McOmie, "Protective Groups in Organic

Chemistry", Plenum Press, London and New York 1973, in T. W. Greene and P. G. M. Wuts, "Protective Groups in Organic Synthesis", Third edition, Wiley, New York 1999, in "The Peptides"; Volume 3 (editors: E. Gross and J. Meienhofer), Academic Press, London and New York 1981, in "Methoden der organischen Chemie" (*Methods of Organic Chemistry*), Houben Weyl, 4th edition, Volume 15/1, Georg Thieme Verlag, Stuttgart 1974, in H.-D. Jakubke and H. Jeschkeit, "Aminosäuren, Peptide, Proteine" (*Amino acids, Peptides, Proteins*), Verlag Chemie, Weinheim, Deerfield Beach, and Basel 1982, and in Jochen Lehmann, "Chemie der Kohlenhydrate: Monosaccharide und Derivate" (*Chemistry of Carbohydrates: Monosaccharides and Derivatives*), Georg Thieme Verlag, Stuttgart 1974. A characteristic of protecting groups is that they can be removed readily (i.e., without the occurrence of undesired secondary reactions) for example by solvolysis, reduction, photolysis or alternatively under physiological conditions (e.g., by enzymatic cleavage).

[0170] Salts of compounds of the present invention having at least one salt-forming group may be prepared in a manner known per se. For example, salts of compounds of the present invention having acid groups may be formed, for example, by treating the compounds with metal compounds, such as alkali metal salts of suitable organic carboxylic acids, e.g., the sodium salt of 2-ethylhexanoic acid, with organic alkali metal or alkaline earth metal compounds, such as the corresponding hydroxides, carbonates or hydrogen carbonates, such as sodium or potassium hydroxide, carbonate or hydrogen carbonate, with corresponding calcium compounds or with ammonia or a suitable organic amine, stoichiometric amounts or only a small excess of the salt-forming agent preferably being used. Acid addition salts of compounds of the present invention are obtained in customary manner, e.g., by treating the compounds with an acid or a suitable anion exchange reagent. Internal salts of compounds of the present invention containing acid and basic salt-forming groups, e.g., a free carboxy group and a free amino group, may be formed, e.g., by the neutralisation of salts, such as acid addition salts, to the isoelectric point, e.g., with weak bases, or by treatment with ion exchangers.

[0171] Salts can be converted in customary manner into the free compounds; metal and ammonium salts can be converted, for example, by treatment with suitable acids, and acid addition salts, for example, by treatment with a suitable basic agent.

[0172] Mixtures of isomers obtainable according to the invention can be separated in a manner known per se into the individual isomers; diastereoisomers can be separated, for example, by partitioning between polyphasic solvent mixtures, recrystallisation and/or chromatographic separation, for example over silica gel or by, e.g., medium pressure liquid chromatography over a reversed phase column, and racemates can be separated, for example, by the formation of salts with optically pure salt-forming reagents and separation of the mixture of diastereoisomers so obtainable, for example by means of fractional crystallisation, or by chromatography over optically active column materials.

[0173] Intermediates and final products can be worked up and/or purified according to standard methods, e.g., using chromatographic methods, distribution methods, (re-) crystallization, and the like.

General Process Conditions

[0174] The following applies in general to all processes mentioned throughout this disclosure.

[0175] The process steps to synthesize the compounds of the invention can be carried out under reaction conditions that

are known per se, including those mentioned specifically, in the absence or, customarily, in the presence of solvents or diluents, including, for example, solvents or diluents that are inert towards the reagents used and dissolve them, in the absence or presence of catalysts, condensation or neutralizing agents, for example ion exchangers, such as cation exchangers, e.g., in the H^+ form, depending on the nature of the reaction and/or of the reactants at reduced, normal or elevated temperature, for example in a temperature range of from about $-100^\circ C.$ to about $190^\circ C.$, including, for example, from approximately $-80^\circ C.$ to approximately $150^\circ C.$, for example at from -80 to $-60^\circ C.$, at room temperature, at from -20 to $40^\circ C.$ or at reflux temperature, under atmospheric pressure or in a closed vessel, where appropriate under pressure, and/or in an inert atmosphere, for example under an argon or nitrogen atmosphere.

[0176] At all stages of the reactions, mixtures of isomers that are formed can be separated into the individual isomers, for example diastereoisomers or enantiomers, or into any desired mixtures of isomers, for example racemates or mixtures of diastereoisomers, for example analogously to the methods described in *Science of Synthesis: Houben-Weyl Methods of Molecular Transformation*. Georg Thieme Verlag, Stuttgart, Germany, 2005.

[0177] The solvents from which those solvents that are suitable for any particular reaction may be selected include those mentioned specifically or, for example, water, esters, such as lower alkyl-lower alkanoates, for example ethyl acetate, ethers, such as aliphatic ethers, for example diethyl ether, or cyclic ethers, for example tetrahydrofuran or dioxane, liquid aromatic hydrocarbons, such as benzene or toluene, alcohols, such as methanol, ethanol or 1- or 2-propanol, nitriles, such as acetonitrile, halogenated hydrocarbons, such as methylene chloride or chloroform, acid amides, such as dimethylformamide or dimethyl acetamide, bases, such as heterocyclic nitrogen bases, for example pyridine or N-methylpyrrolidin-2-one, carboxylic acid anhydrides, such as lower alkanic acid anhydrides, for example acetic anhydride, cyclic, linear or branched hydrocarbons, such as cyclohexane, hexane or isopentane, or mixtures of those solvents, for example aqueous solutions, unless otherwise indicated in the description of the processes. Such solvent mixtures may also be used in working up, for example by chromatography or partitioning.

[0178] The compounds, including their salts, may also be obtained in the form of hydrates, or their crystals may, for example, include the solvent used for crystallization. Different crystalline forms may be present.

[0179] The invention relates also to those forms of the process in which a compound obtainable as an intermediate at any stage of the process is used as starting material and the remaining process steps are carried out, or in which a starting material is formed under the reaction conditions or is used in the form of a derivative, for example in a protected form or in the form of a salt, or a compound obtainable by the process according to the invention is produced under the process conditions and processed further in situ.

Prodrugs

[0180] This invention also encompasses pharmaceutical compositions containing, and methods of treating bacterial infections through administering, pharmaceutically acceptable prodrugs of compounds of the compounds of the invention. For example, compounds of the invention having free amino, amido, hydroxy or carboxylic groups can be converted into prodrugs. Prodrugs include compounds wherein an amino acid residue, or a polypeptide chain of two or more

(e.g., two, three or four) amino acid residues is covalently joined through an amide or ester bond to a free amino, hydroxy or carboxylic acid group of compounds of the invention. The amino acid residues include but are not limited to the 20 naturally occurring amino acids commonly designated by three letter symbols and also includes 4-hydroxyproline, hydroxylysine, demosine, isodemosine, 3-methylhistidine, norvalin, beta-alanine, gamma-aminobutyric acid, citrulline, homocysteine, homoserine, ornithine and methionine sulfone. Additional types of prodrugs are also encompassed. For instance, free carboxyl groups can be derivatized as amides or alkyl esters. Free hydroxy groups may be derivatized using groups including but not limited to hemisuccinates, phosphate esters, dimethylaminoacetates, and phosphoryloxymethyl carbonyls, as outlined in *Advanced Drug Delivery Reviews*, 1996, 19, 115. Carbamate prodrugs of hydroxy and amino groups are also included, as are carbonate prodrugs, sulfonate esters and sulfate esters of hydroxy groups. Derivatization of hydroxy groups as (acyloxy)methyl and (acyloxy)ethyl ethers wherein the acyl group may be an alkyl ester, optionally substituted with groups including but not limited to ether, amine and carboxylic acid functionalities, or where the acyl group is an amino acid ester as described above, are also encompassed. Prodrugs of this type are described in *J. Med. Chem.* 1996, 39, 10. Free amines can also be derivatized as amides, sulfonamides or phosphonamides. All of these prodrug moieties may incorporate groups including but not limited to ether, amine and carboxylic acid functionalities.

[0181] Any reference to a compound of the present invention is therefore to be understood as referring also to the corresponding pro-drugs of the compound of the present invention, as appropriate and expedient.

Combinations

[0182] A compound of the present invention may also be used in combination with other agents, e.g., an additional antibacterial compound that is or is not a compound of the invention, for treatment of a bacterial infection in a subject.

[0183] By the term "combination" is meant either a fixed combination in one dosage unit form, or a kit of parts for the combined administration where a compound of the present invention and a combination partner may be administered independently at the same time or separately within time intervals that especially allow that the combination partners show a cooperative, e.g., synergistic, effect, or any combination thereof.

[0184] A compound of the present invention may be used in combination with another antibacterial agent. The term "antibacterial agent" refers to any substance that is either bactericidal or bacteriostatic, i.e., capable of killing or inhibiting the growth of bacterial cells. Antibacterial agents include antibiotics, biocides, antimicrobials, and bacteriostatic agents. The known types of antibiotics include, e.g., cell wall synthesis inhibitors, cell membrane inhibitors, protein synthesis inhibitors and inhibitors that bind to or affect the synthesis of DNA or RNA. Numerous antibiotic agents suitable for use in the treatment of bacteria-related diseases and disorders, are known and disclosed, e.g. in *The Physician's Desk Reference (PDR)*, Medical Economics Company (Montvale, N.J.), (53. sup.rd Ed.), 1999; *Mayo Medical Center Formulary*, Unabridged Version, Mayo Clinic (Rochester, Minn.), January 1998; *Merck Index: An Encyclopedia of Chemicals, Drugs and Biologicals*, (11. sup.th Ed.), Merck & Co., Inc. (Rahway, N.J.), 1989; *University of Wisconsin Antimicrobial Use Guide*, <http://www.medsch.wisc.edu/clinsci/5amcg/amcg.html>; *Introduction on the Use of the Antibiotics Guideline, of Specific Antibiotic Classes*, Thomas Jefferson Uni-

versity, http://jeffline.tju.edu/CWIS/OAC/antibiotics_guide/intro.html; and references cited therein.

[0185] Examples of antibiotics for use in combination with the compounds of the invention include, but are not limited to, quinolone, macrolide, glycopeptide, oxazolidinone, β -lactams (including amoxicillin, ampicillin, bacampicillin, carbenicillin, cloxacillin, dicloxacillin, flucloxacillin, methicillin, mezlocillin, nafcillin, oxacillin, penicillin G, penicillin V, piperacillin, pivampicillin, pivmecillinam, ticarcillin, sulbactam, tazobactam, clavulanate), cephalosporins (cefactor, cefadroxil, cefamandole, cefazolin, cefdinir, cefditoren, cefepime, cefixime, cefonicid, cefoperazone, cefotaxime, cefotetan, cefoxitin, cefpodoxime, cefprozil, ceftazidime, ceftibuten, ceftizoxime, ceftriaxone, cefuroxime, cephalixin, cephalothin, cephapirin, cephradine), aminoglycosides (including gentamycin, streptomycin, amikacin, kanamycin, viomycin, capreomycin), ethionamide, prothionamide, cycloserine, dapsone, clofazimine, tetracyclines (tetracycline, doxycycline, chlortetracycline, oxytetracycline, minocycline demeclocycline), oxazolidinones (linezolid, eperezolid), metronidazole, rifabutin, isoniazid, ethambutol, and combinations thereof.

[0186] Examples of anti-viral agents for use in combination with the compounds of the invention include, but are not limited to, zidovudine, lamivudine, didanosine, zalcitabine, stavudine, abacavir, nevirapine, delavirdine, emtricitabine, efavirenz, saquinavir, ritonavir, indinavir, nelfinavir, amprenavir, tenofovir, adefovir, atazanavir, fosamprenavir, hydroxyurea, AL-721, amplitgen, butylated hydroxytoluene; polymannoacetate, castanospermine; contracan; creme pharmatex, CS-87, penciclovir, famciclovir, acyclovir, cytofovir, ganciclovir, dextran sulfate, D-penicillamine trisodium phosphonoformate, fusidic acid, HPA-23, eflornithine, non-oxynol, pentamidine isethionate, peptide T, phenytoin, isoniazid, ribavirin, rifabutin, ansamycin, trimetrexate, SK-818, suramin, UA001, enfuvirtide, gp41-derived peptides, antibodies to CD4, soluble CD4, CD4-containing molecules, CD4-IgG2, and combinations thereof.

[0187] Further examples of agents the compounds of the present invention can be used in combination with include, but are not limited to, free radical scavengers, ascorbic acid, Vitamin C, anti-cancer agents, chemotherapeutic agents, non-steroidal anti-inflammatory drugs, steroidal anti-inflammatory drugs, anti-fungal agents, detoxifying agents, analgesics, bronchodilators, drugs for the treatment of vascular ischemia anti-body monoclonal agent, minoxidil for topical application for hair growth, diuretics, immunosuppressants, lymphokynes, α -and- β -interferon and combinations thereof.

[0188] The compound of the invention and any additional agent may be formulated in separate dosage forms. Alternatively, to decrease the number of dosage forms administered to a patient, the compound of the invention and any additional agent may be formulated together in any combination. For example, the compound of the invention inhibitor may be formulated in one dosage form and the additional agent may be formulated together in another dosage form. Any separate dosage forms may be administered at the same time or different times.

[0189] Alternatively, a composition of this invention comprises an additional agent as described herein. Each component may be present in individual compositions, combination compositions, or in a single composition.

EXEMPLIFICATION OF THE INVENTION

[0190] The invention is further illustrated by the following examples, which should not be construed as further limiting. The practice of the present invention will employ, unless

otherwise indicated, conventional techniques of cell biology, cell culture, molecular biology, transgenic biology, microbiology and immunology, which are within the skill of the art.

General Synthesis Methods

[0191] All starting materials, building blocks, reagents, acids, bases, dehydrating agents, solvents, and catalysts utilized to synthesis the compounds of the present invention are either commercially available or can be produced by organic synthesis methods known to one of ordinary skill in the art (Houben-Weyl 4th Ed. 1952, Methods of Organic Synthesis, Thieme, Volume 21). Further, the compounds of the present invention can be produced by organic synthesis methods known to one of ordinary skill in the art as shown in the following examples.

Analytical Methods

[0223] NMR: proton spectra are recorded on a Bruker 400 MHz ultrashield spectrometer. Chemical shifts are reported relative to methanol (δ 3.31), dimethyl sulfoxide (δ 2.50), or chloroform (δ 7.26).

[0224] LCMS: compounds are analyzed on an Inertsil ODS-3 column (C18, 50×4.6 mm, 3 μ m) with a 2 min gradient elution (25% acetonitrile/H₂O/5 mM ammonium formate) and a flow rate of 4 ml/min.

[0225] HPLC purification utilizes a C8 or C18 column (30×100 mm, 5 μ m, brand: Sunfire or XTerra) and is performed according to two methods. Method 1 consists of 0.1% TFA in 10%-95% ACN in H₂O. Method 2 consists of 10 mM NH₄OH in 40%-95% ACN in H₂O.

[0226] LC analysis utilizes an Atlantis brand C18 column (150 mm) with gradient elution (0-95% acetonitrile in water +0.1% TFA).

-continued

General Scheme 1:

-continued

-continued

The compound of general formula (i) may be prepared via synthetic methods well known to those skilled in the art, or alternatively isolated from a fermentation broth. See, for example, U.S. Pat. No. 5,202,241, which is incorporated herein in its entirety. The compound of general structural formula (ii) may be prepared by process A by the acid or base mediated rearrangement of compound (i) in the presence of water and a suitable acid or base. The compound of general formula (iii) may be prepared in process B from (ii) directly via reaction with azide or alternatively through a multi step process which includes removal of the ester functionality through hydrolysis with a suitable base or acid, activation of the carboxylic acid moiety using a suitable activation agent, and reaction with a suitable reagent such as azide. Azides represented by formula (iii) are known in the art and are readily synthesized by standard procedures commonly employed in the art. The compound of general formula (iv) may be prepared by reaction of the azide (iii) with a nucleophile, alcohol, amine, or protecting group (X_1). A suitable protecting group can be selected by those skilled in the art. Protecting groups are selected so that they are suitable for the depicted transformations and can be removed following the synthesis with little or no loss of yield. The introduction and selective removal of protecting groups are taught in Greene and Wuts, "Protective Groups in Organic Synthesis", John Wiley & Sons (1991). The compound of general structural formula (v) may be prepared by reacting compound (iv) with a reactive reagent such as an electrophile, alkylating agent, acylating agent, or protecting group (X_2) to afford compound (v). The compound of general structure (vi) can be prepared by reacting compound (v) with acid, base, a nucleophile, or electrophile to remove the protecting group (X_1). The compound of general structure (vii) can be prepared by reacting compound (vi) with a suitable electrophile, alkylating agent, or acylating agent (X_3). The compound of general structure

(viii) can be prepared by reacting compound (vii) with a suitable electrophile, alkylating agent, or acylating agent (X_4). The compound of general structure (ix) can be prepared by reacting compound (viii) with acid, base, a nucleophile, or electrophile to remove any remaining protecting groups. Alternatively, any of these steps (A-H) may be performed in a different order, or with some steps removed or slightly altered, which is obvious to those skilled in the art.

General Scheme 2:

Intermediate vi can also be cyclized to form a heterocycle or heteroaromatic ring according to process J through an alkylation, acylation, cyclization, transition metal-mediated coupling, or condensation which may be acid or base catalyzed to form x. X can be further derivitized through alkylation, acylation, transition metal-mediated coupling, etc. and the protecting groups removed through process K to provide xi.

Scheme 3: Preparation of Diacid (3-4): (Compound 3 of Table A)

Preparation of Acylazide (XIII):

[0227]

[0228] To a solution of the ester (XII), 1.5 g, 1.16 mmol) in THF (300 mL) is added 20 mL H₂O and NaOH (60 mg, 1.50 mmol). The reaction is stirred at 60° C. for 1.5 h and monitored by TLC (10% MeOH/DCM) and LCMS. After completion, the reaction is concentrated to dryness. The off-white solid is suspended in toluene (100 mL) and concentrated to dryness (repeat 3×), which affords the acid, an off-white solid. The crude solid is stored in vacuo (0.1 Torr) for 12 h. LCMS: R_t=1.12 min, [M+H]⁺1125.

[0229] The crude acid is suspended in 300 mL acetone. The flask is sonicated and the solid scraped down the sides of the flask for 15 min. To this suspension is added TEA (2.0 mL, 14.2 mmol) and ethyl chloroformate (2.0 mL, 20.91 mmol). The reaction appears to slowly dissolve. Further sonication, and vigorous stirring is used to break up all particles. After 1 h, the reaction appears complete via LCMS and NaN₃ (500 mg, 7.69 mmol) is added. The suspension (white/yellow in appearance) is stirred for 1 h at 60° C. and monitored by LCMS. Two more aliquots of NaN₃ (500 mg, 7.69 mmol) is added and the reaction stirs for 20 min. The reaction is concentrated onto SiO₂ and purified by flash chromatography (1.5"×1.5" SiO₂ column, 3 L EtOAc). This affords 920 mg of crude acyl-azide (XIII), a white solid. The crude material is taken on to the next step with no further purification. LCMS: R_t=1.55 min, [M+H]⁺1150.

Example 1

Preparation of Diacid (XV; Compound 3 of Table A)

[0230]

[0231] To a solution of the acyl azide (XIII, 3 g, 2.6 mmol) in PhMe (100 mL) is added 4-hydroxy-butyric acid methyl ester (1.2 g, 10.4 mmol) and the reaction mixture is stirred at 75° C. for 12 hours. 7 g of SiO₂ is added to the mixture and the solvents are concentrated under reduced pressure. The solid is purified by flash chromatography, eluting with 100% EtOAc to provide 3.82 g, of a yellow solid (XIV). MS m/z 1240 (M+H)⁺.

[0232] To a solution of the methyl ester (XIV, 1.8 g, 0.15 mmol) in DMF (50 mL), is added 4-bromo-butyric acid methyl ester (1 g, 0.87 mmol) and Cs₂CO₃ (800 mg, 0.48 mmol). The reaction is stirred at 22° C. for 48 hours. 5 g SiO₂ is added to the mixture and all solvents were evaporated in vacuo. The solid is purified by flash chromatography, eluting with MeOH/DCM (0-10%) to provide 1.5 g (75%), of a yellow solid. MS m/z 1357 (M + H₂O).

[0233] To a solution of the diester (250 mg, 0.187 mmol) in MeOH (10 mL) and H₂O (2 mL) is added NaOH (37 mg, 0.933 mmol) and the reaction mixture is stirred for 72 hours at 22° C. 6 g of SiO₂ is added to the mixture and the solvents are concentrated under reduced pressure. The solid is purified by flash chromatography, eluting with MeOH/DCM (5-10%) then to 10% MeOH/DCM with 1% AcOH which provides 0.2 g of a yellow oil. The yellow oil is purified by Gilson HPLC eluting with ACN/H₂O with 3% n-propanol (gradient elution: 5-50%). Lyophilization for 12 h provides 4 mg (3-4). MS m/z 1329 (M+H₂O).

Example 2

Preparation of Diacid (XVI; compound 4 of Table A)

[0234]

Step 1:

[0235] To a suspension of acylazide (XIII, 0.600 g, 0.522 mmol) in toluene (20 mL) is added trans-4-hydroxy-cyclohexanecarboxylic acid ethylester (0.134 g, 0.778 mmol) and the mixture is stirred at 80° C. for 5 h. The reaction is concentrated in vacuo and the crude product is purified by flash chromatography (MeOH/DCM) to yield 0.236 g (0.182 mmol, 35%) of the ester.

Step 2:

[0236] To a solution of the ester (125 mg, 0.098 mmol) in DMF (0.8 mL), is added methyl 4-bromobutyrate (67 uL, 0.588 mmol) and Cs₂CO₃ (112 mg, 0.341 mmol). The reaction is stirred at rt for 18 hours. The reaction mixture is concentrated, and the residue is purified by flash chromatography, eluting with MeOH/DCM (0-10%) to provide 100 mg (74.2%), of a yellow solid, the diester. MS m/z 1381 (M+H)⁺.

Step 3:

[0237] To a solution of the diester (180 mg, 0.130 mmol) in MeOH (3.6 mL) and THF (0.9 mL) is added 3N NaOH (0.45 mL, 1.30 mmol) and the reaction mixture is stirred for 7 hours at rt. The reaction mixture is neutralized with solid NH₄Cl (70 mg, 1.30 mmol). The mixture is then concentrated under reduced pressure. The yellow solid is purified by Gilson HPLC eluting with ACN/H₂O with 0.1% TFA (gradient elution: 30-80%). Lyophilization for 12 h provides 54 mg of

light yellow solid, 3-5. HRMS (ES⁺) C₅₉H₆₁N₁₃O₁₃S₆: Calc.: 1352.2914 [M+H]⁺; Found: 1352.2878.

Example 3

Preparation of Diacid (XVII; Compound 5 of Table A)

[0238]

Step 1:

[0239] To a solution of the cyclohexyl ester (Example 2, step 1, 300 mg, 0.234 mmol) in DMF (2.1 mL), is added ethyl 7-bromo-heptanoate (282 uL, 1.40 mmol) and Cs₂CO₃ (267 mg, 0.819 mmol). The reaction is stirred at rt for 18 hours. The reaction mixture is concentrated, and the residue is purified by flash chromatography, eluting with MeOH/DCM (0-10%) to provide 210 mg of diester. MS m/z 1437 (M+H)⁺.

Step 2:

[0240] To a solution of the diester (210 mg, 0.146 mmol) in MeOH (4.5 mL) and THF (1.5 mL) is added 3N NaOH (0.49 mL, 1.46 mmol) and the reaction mixture is stirred for 18 hours at rt. The reaction mixture is neutralized with solid NH₄Cl (81 mg, 1.50 mmol), and is concentrated under reduced pressure. The yellow solid is purified by Gilson HPLC eluting with ACN/H₂O with 0.1% TFA (30-80%). Lyophilization for 12 h provides 86 mg of light yellow solid, XVII. HRMS (ES⁺) C₆₂H₆₇N₁₃O₁₃S₆: Calc.: 1394.3384 [M+H]⁺; Found: 1394.3356

Biological Results:

[0241] Using the standard MIC test described above with the bacteria *Enterococcus faecalis*, *Enterococcus faecium* or *Staphylococcus aureus*, compounds 4-6 demonstrate a minimum inhibitory concentration ranging from 0.0010 µg/mL to 128 µg/mL.

Equivalents

[0242] Those skilled in the art will recognize, or be able to ascertain using no more than routine experimentation, many

equivalents to the specific embodiments and methods described herein. Such equivalents are intended to be encompassed by the scope of the following claims.

Incorporation by Reference

[0243] The entire contents of all patents, published patent applications and other references cited herein are hereby expressly incorporated herein in their entireties by reference.

What is claimed is:

1. A compound of the formula I:

and pharmaceutically acceptable salts, enantiomers, stereoisomers, rotamers, tautomers, diastereomers, atropisomers or racemates thereof, including the pyridine N-oxide thereof;

wherein

R¹ is -Z-CO₂H and -A-Z-CO₂H;

R^{1a} is hydrogen, -Z-CO₂H, and -A-Z-CO₂H, wherein if R^{1a} is hydrogen, then the Z residue of R¹ is substituted by at least two CO₂H groups; or

R¹ and R^{1a}, taken in combination, form a saturated, partially unsaturated or aromatic heterocycle having 4 to 7 ring atoms and having 0-3 additional ring heteroatoms selected from N, O and S, wherein the heterocycle is substituted by at least two residues independently selected from CO₂H, -Z-CO₂H, and -A-Z-CO₂H;

A is independently selected at each occurrence from the group consisting of a -C(O)-, -C(O)O-, -C(O)N(R^{8a})-, -S(O)₂-, -S(O)-, -C(H)=N-, -S(O)₂N(R^{8a})-, and -S(O)N(R^{8a})-;

Z is C₁-C₁₀alkylene, C₃-C₈cycloalkylene, C₃-C₈heterocycloalkylene, phenylene, or 5-6 membered heteroarylene, each of which is optionally substituted with one or more groups independently selected from C₁-C₄alkyl, C₁-C₄alkoxy, hydroxy, amino, mono- and di-C₁-C₆alkylamino, C(O)OH, or halogen;

R^{2a} is selected from the group consisting of H, substituted or unsubstituted alkyl, OH, OR^{4a}, OC(O)R^{4a}, OC(O)N(R^{8a})₂ and N(R^{8a})₂;

R^{2b} is selected from the group consisting of absent, H and alkyl, or R^{2a} and R^{2b} may together form $=O$ or $=NH$; R^3 and R^{12} are each, independently, selected from the group consisting of H, halogen, OR^{4b} , $-A-J$, and $N(R^{8a})_2$;

R^{4a} is selected from the group consisting of H, and alkyl;

R^{4b} is selected from the group consisting of alkyl and $-(CH_2-CH_2-O-)_n-R^9$, wherein n is an integer of 1-500, 1,000, 2,000, 3,000, 4,000, 5,000, 10,000, 20,000, 30,000, 40,000, 50,000, or 60,000 or is a mean of a plurality of integers having a value of 1-500, 1,000, 2,000, 3,000, 4,000, 5,000, 10,000, 20,000, 30,000, 40,000, 50,000, or 60,000;

R^5 is selected from the group consisting of H, alkyl, and R^{4b} ;

J is selected from the group consisting of H, F, O-alkyl, $N(R^{8a})_2$, $N^+(R^{8a})_3$, $N(R^{8a})C(O)alkyl$, CO_2H , $C(=O)N(R^{8a})_2$, $CO_2-alkyl$, $P(O)(OH)_2$, $P(O)(O-alkyl)_2$, and a substituted nitrogen-containing heterocycle;

R^{8a} is absent, or selected from the group consisting of H, $-(alkyl)-$, $-(cycloalkyl)-$, $C(alkyl)_2-J$, $-R^{4b}$, wherein R^{8a} can also cyclize with the atom to which R^{8a} is bonded to form a 3, 4, 5, 6 or 7-membered ring that is aromatic or non-aromatic and may contain one or more heteroatoms, wherein the ring may be further substituted one or more times with substituents that are the same or different; and

R^9 is selected from the group consisting of H, alkyl and CH_2CO_2H .

2. The compound of claim 1, wherein R^{2b} , R^{4b} and R^5 are H, and R^{4a} is CH_3 .

3. The compound of claim 1, wherein R^{2b} , R^{4b} and R^5 are H, R^{4a} is CH_3 , and R^{12} is CH_2-O-CH_3 .

4. The compound of claim 1, wherein formula I is represented by a compound of formula II:

and pharmaceutically acceptable salts thereof.

5. The compound of claim 1, wherein formula I is represented by a compound of formula III:

and pharmaceutically acceptable salts, enantiomers, stereoisomers, rotamers, tautomers, diastereomers, atropisomers or racemates thereof, including the pyridine N-oxide thereof.

6. The compound of claim 5, wherein R^{2b} , R^{4b} and R^5 are H, and R^{4a} is CH_3 .

7. The compound of claim 5, wherein R^{2b} , R^{4b} and R^5 are H, R^{4a} is CH_3 , and R^{12} is CH_2-O-CH_3 .

8. The compound of claim 5, wherein formula III is represented by a compound of formula IV:

10. The compound of claim 1, wherein formula I is represented by a compound of formula V:

9. The compound of claim 8, wherein

A is selected from the group consisting of $-\text{C}(\text{O})\text{O}-$, $\text{C}(\text{O})-\text{NH}-$, $-\text{C}(\text{O})-$, $-\text{S}(\text{O})_2-$, and $-\text{S}(\text{O})_2\text{NH}-$; and

Z is independently selected at each occurrence from the group consisting of C_1 - C_{10} alkylene,

and pharmaceutically acceptable salts, enantiomers, stereoisomers, rotamers, tautomers, diastereomers, atropisomers or racemates thereof, including the pyridine N-oxide thereof, wherein

D represents a five or six membered heterocyclic ring which is saturated or aromatic, which ring comprises 0-2 additional ring heteroatoms selected from N, O or S.

11. The compound of claim 10, wherein R^{2b} , R^{4b} and R^5 are H, and R^{4a} is CH_3 .

12. The compound of claim 10, wherein R^{2b} , R^{4b} and R^5 are H, R^{4a} is CH_3 , and R^{12} is CH_2-O-CH_3 .

13. The compound of claim 10, wherein formula V is represented by a compound of formula VI:

14. The compound of claim 13, wherein

A is selected from the group consisting of $-C(O)O-$, $C(O)-NH-$, $-C(O)-$, $-S(O)_2-$, and $-S(O)_2NH-$; and

Z is independently selected at each occurrence from the group consisting of C_1-C_{10} alkylene,

-continued

15. The compound of claim 1, wherein R^{2a} is OH or OAc.

16. The compound of claim 1, wherein the core pyridine functionality is of the following N-oxide formula:

17. A compound selected from the group consisting of:

18. A compound of formula VII:

VII

R^{2a} is selected from the group consisting of H, substituted or unsubstituted alkyl, OH, OR^{4a} , $OC(O)R^{4a}$, $OC(O)N(R^{8a})_2$ and $N(R^{8a})_2$;

R^{2b} is selected from the group consisting of absent, H and alkyl, or R^{2a} and R^{2b} may together form $=O$ or $=NH$; R^3 and R^{12} are each, independently, selected from the group consisting of H, halogen, OR^{4b} , $-A-J$, and $N(R^{8a})_2$;

R^{4a} is selected from the group consisting of H, and alkyl;

R^{4b} is selected from the group consisting of alkyl and $-(CH_2-CH_2-O)_i-R^9$, wherein i is an integer of 1-500, 1,000, 2,000, 3,000, 4,000, 5,000, 10,000, 20,000, 30,000, 40,000, 50,000, or 60,000 or is a mean of a plurality of integers having a value of 1-500, 1000, 2,000, 3,000, 4,000, 5,000, 10,000, 20,000, 30,600, 40,000, 50,000, or 60,000;

R^5 is selected from the group consisting of H, alkyl, and R^{4b} ;

J is selected from the group consisting of H, F, O-alkyl, $N(R^{8a})_2$, $N^+(R^{8a})_3$, $N(R^{8a})C(O)alkyl$, CO_2H , $C(=O)N(R^{8a})_2$, $CO_2-alkyl$, $P(O)(OH)_2$, $P(O)(O-alkyl)_2$, and a substituted nitrogen-containing heterocycle;

R^{8a} is absent, or selected from the group consisting of H, $-(alkyl)-$, $-(cycloalkyl)-$, $C(alkyl)_2-J$, $-R^{4b}$, wherein R^{8a} can also cyclize with the atom to which R^{8a} is bonded to form a 3, 4, 5, 6 or 7-membered ring that is aromatic or non-aromatic and may contain one or more heteroatoms, wherein the ring may be further substituted one or more times with substituents that are the same or different; and

R^9 is selected from the group consisting of H, alkyl and CH_2CO_2H .

and pharmaceutically acceptable salts, enantiomers, stereoisomers, rotamers, tautomers, diastereomers, atropisomers or racemates thereof, including the pyridine N-oxide thereof;

wherein

R^1 is $-Z-CO_2H$ and $-A-Z-CO_2H$;

R^{1a} is hydrogen, $-Z-CO_2H$, and $-A-Z-CO_2H$, wherein if R^{1a} is hydrogen, then the Z residue of R^1 is substituted by at least two CO_2H groups; or

R^1 and R^{1a} , taken in combination, form a saturated, partially unsaturated or aromatic heterocycle having 4 to 7 ring atoms and having 0-3 additional ring heteroatoms selected from N, O and S, wherein the heterocycle is substituted by at least two residues independently selected from CO_2H , $-Z-CO_2H$, and $-A-Z-CO_2H$;

A is independently selected at each occurrence from the group consisting of a $-C(O)-$, $-C(O)O-$, $-C(O)N(R^{8a})-$, $-S(O)_2-$, $-S(O)-$, $-C(H)=N-$, $-S(O)_2N(R^{8a})-$, and $-S(O)N(R^9)-$;

Z is $C_1-C_{10}alkylene$, $C_3-C_8cycloalkylene$, $C_3-C_8heterocycloalkylene$, phenylene, or 5-6 membered heteroarylene, each of which is optionally substituted with one or more groups independently selected from C_1-C_4alkyl , $C_1-C_4alkoxy$, hydroxy, amino, mono- and di- $C_1-C_6alkylamino$, $C(O)OH$, or halogen;

R^2 is hydrogen, $C_{1-6}alkyl$, hydroxy $C_{1-6}alkyl$, $C_{1-6}alkoxyC_{0-6}alkyl$, $C_{3-7}cycloalkylC_{0-4}alkyl$, aryl $C_{0-4}alkyl$, or a residue of the formula:

19. A method of treating a bacterial infection comprising administering to a subject in need thereof a pharmaceutically acceptable amount of a compound of claims 1, such that the bacterial infection is treated.

20. A method of treating an EF-Tu associated-state comprising administering to a subject in need thereof a pharmaceutically acceptable amount of a compound of claims 1, such that the EF-Tu associated state is treated.

21. A method of treating, inhibiting or preventing the activity of EF-Tu in a subject in need thereof, comprising administering to the subject a pharmaceutically acceptable amount of a compound of claim 1.

22. The method of claim 21, wherein a bacterial infection is treated in a subject in need thereof.

23. A method of treating, inhibiting or preventing the activity of bacteria in a subject in need thereof, comprising administering to the subject a pharmaceutically acceptable amount of a compound of claims 1, wherein the compound interacts with any target in the life cycle of the bacteria.

24. The method of claim 23, wherein the target is EF-Tu.

25. A method of treating a bacterial infection in a subject, comprising administering to a subject in need thereof a phar-

maceutically acceptable amount of a compound of claims 1, and a pharmaceutically acceptable carrier, such that the bacterial infection is treated.

26. A method of treating a bacterial infection comprising administering to a subject in need thereof a pharmaceutically effective amount of a compound of claims 1, in combination with a pharmaceutically effective amount of an additional therapeutic agent, such that the bacterial infection is treated.

27. The method of claim 26, wherein the compound of any one of claims 1 and the other pharmaceutical agent are administered as part of the same pharmaceutical composition.

28. The method of claim 26, wherein the compound of any one of claims 1 and the other therapeutic agent are administered as separate pharmaceutical compositions, and the com-

pound is administered prior to, at the same time as, or following administration of the other agent.

29. A packaged bacterial infection treatment, comprising a compound of claim 1, packaged with instructions for using an effective amount of the compound to treat a bacterial infection.

30. A method of treating acne in subject in need thereof comprising administering to the subject a pharmaceutically acceptable amount of a compound of claims 1.

31. A pharmaceutical composition comprising a compound of claim 1 and at least one pharmaceutically acceptable carrier or diluent.
